Machine Tool Design Volume 2:

Machine Tool Design N. Acherkan, N. Lisitsyn, 1973 **Machine Tool Design** N. Ignatyev, N. Acherkan, Yu Mikheyev, 2000 This is volume 4 of a fundamental four volume work translated from the considerably revised second edition. It should be of great value to engineers engaged in the design, manufacture and maintenance of machine tool equipment. It can also be used to advantage by the students of engineering institutes majoring in Process Engineering, Metal Cutting, Machine Tools or Cutting Tool Design. The first volume deals with the basic machine tools and special machine tools used in cutting tool production. The classification, type and size range and designation of machine tools employed in Soviet practice are given in detail together with the types of motion found in machine tools. Metal cutting lathes, turret lathes, vertical boring machines, automatic and semiautomatic lathes, milling machines and many other types of machine tools are described. Special attention has been given to machine tools designed for the production of cutting tools. These include general and single purpose semiautomatic precision thread grinding machines, automatic and semiautomatic tracer controlled lathes with hydraulic controls, jig boring machines and specialized machine tools as well as automatic transfer machines for cutting tool production. Volume two contains Parts Three and Four. Part Three deals with the kinematics of machine tools. This branch of machine tool design has been strictly systematized by the author and is set forth with exceptional clarity. The kinematic structures of a great many different types of machine tools, including the most complex gear cutting machines, are analyzed by methods developed in the text which take into consideration the interrelation between the workpiece to be produced in the given machine tool. Part Four takes up hydraulic drives of machine tools. It contains all the theoretical and practical data required in the application of fluid power and control systems to machine tools. Volume Three contains Part Five and this deals with machine tool design proper. It is a comprehensive scientific treatment of the subject and is a revised and complemented version of a previous Russian edition which has become a reliable reference book for all Soviet machine tool engineers and has been translated into French. Such questions as performance criteria, basic design data, principal specifications and the development of the kinematic scheme of a new machine tool are dealt with in great detail. Design recommendations are given as well as the necessary calculation data for the basic elements of machine tools: speed and feed gearboxes, stepless drives, rapid traverse mechanisms, spindles and spindle bearings, mechanisms for rectilinear motion, small displacement and periodic motion reversing devices, beds, columns, tables and other housing type components, slideways and antifriction ways. The fourth and final volume covers Automatic Machine Tools and Transfer Machines and Machine Tool Testing and Research. Parts Six and Seven of the complete work. Part Six deals with the fundamental principles of machine tool automation, the various systems of numerical programmed control that have found extensive application in modern machine tool design in the USSR and other countries. Much space has been given to automatic transfer machines, including in-line rotary and other types, their layout, features, design procedures, structure and output. Current methods of testing and

investigating the geometrical kinematic dynamic and operational characteristics of machine tools are considered in Part Seven Methods of testing the quality characteristics of determining the corresponding criteria indices and of using contemporary apparatus for this purpose are dealt with

Analysis of Material Removal Processes Warren R. DeVries, 2012-12-06 Metal removal processes cutting and grinding in this book are an integral part of a large number of manufacturing systems either as the primary manufacturing process or as an important part of preparing the tooling for other manufacturing processes In recent years industry and educational institutions have concentrated on the metal removal system perhaps at the expense of the process This book concentrates on metal removal processes particularly on the modeling aspects that can either give a direct answer or suggest the general requirements as to how to control improve or change a metal removal process This modeling knowledge is more important with automated computer controlled systems than it has ever been before because quantitative knowledge is needed to design and operate these systems This senior undergraduate graduate textbook is aimed at providing the quantitative knowledge often times at an elementary level for handling the technological aspects of setting up and operating a metal removal process and interpreting the experience of planning operating and improving a metal removal process based on rule of thumb approaches

Advanced Design and Manufacturing Based on STEP Xun Xu, Andrew Yeh Ching Nee, 2009-09-29 Design and manufacturing is the essential element in any product development lifecycle Industry vendors and users have been seeking a common language to be used for the entire

product development lifecycle that can describe design manufacturing and other data pertaining to the product Many solutions were proposed the most successful being the Standard for Exchange of Product model STEP STEP provides a mechanism that is capable of describing product data independent from any particular system The nature of this description makes it suitable not only for neutral file exchange but also as a basis for implementing sharing and archiving product databases ISO 10303 AP203 is the first and perhaps the most successful AP developed to exchange design data between different CAD systems Going from geometric data as in AP203 to features as in AP224 represents an important step towards having the right type of data in a STEP based CAD CAM system Of particular significance is the publication of STEP NC as an extension of STEP to NC utilising feature based concepts for CNC machining purposes The aim of this book is to provide a snapshot of the recent research outcomes and implementation cases in the field of design and manufacturing where STEP is used as the primary data representation protocol The 20 chapters are contributed by authors from most of the top research teams in the world These research teams are based in national research institutes industries as well as universities

Cassier's Engineering Monthly, 1915 Machine Tools Production Systems 1 Christian Brecher, Manfred Weck, 2024-04-12 The first part of the Machine Tools and Production Systems Compendium presents the wide range of machine tools and a comprehensive overview of different machine types Based on the categorization of manufacturing processes according to the German standard DIN 8580 the different areas of application of machine tools are delineated and the various machine designs the mechanical structure as well as the functions of the machine types are explained Numerous three dimensional illustrations of the principles color photos section drawings and schematic diagrams supplement the explanations and provide visual support First the machine types for the different manufacturing processes are described before the multi machine systems are explained This is followed by a detailed presentation of the various equipment components of machine tools In the last newly introduced chapter the volume is concluded by a comprehensive and detailed explanation of three design examples of selected machine tools based on assembly drawings The German Machine Tools and Production Systems Compendium has been completely revised The previous five volume series has been condensed into three volumes in the new ninth edition with colored technical illustrations throughout This first English edition is a translation of the German ninth edition *AMST'05 Advanced Manufacturing Systems and Technology* Elso Kuljanic, 2007-03-23 Manufacturing a product is not difficult the difficulty consists in manufacturing a product of high quality at a low cost and rapidly Drastic technological advances are changing global markets very rapidly In such conditions the ability to compete successfully must be based on innovative ideas and new products which has to be of high quality yet low in price One way to achieve these objectives would be through massive investments in research of computer based technology and by applying the approaches presented in this book The First International Conference on Advanced Manufacturing Systems and Technology AMST87 was held in Opatija Croatia in October 1987 The Second International Conference on

Advanced Manufacturing Systems and Technology AMSV90 was held in Trento Italy in June 1990 The Third Fourth Fifth and Sixth Conferences on Advanced Manufacturing Systems and Technology were all held in Udine Italy as follows AMST93 in April 1993 AMST96 in September 1996 AMST99 in June 1999 and AMST02 in June 2002 *Reports.
