Managers Second Edition has been extensively rewritten to not only bring it up to date with the state of current practice but also to serve as a textbook for university courses in construction engineering and management The authors advanced the previous edition s practical hands on approach and added material on the future of construction equipment fleet management which they believe will require a new technology based skillset to maximize the cost effectiveness of construction equipment operations As such the book covers the latest construction equipment technologies Features Examines emergent technologies in the field including automated machine guidance systems intelligent compaction operations and equipment related civil integrated management tools Provides information on how to reduce an equipment fleet s environmental impact decreasing greenhouse gas emissions through enhanced equipment management and optimization practices Discusses estimating equipment ownership operating costs economic life and optimal replacement timing Demonstrates how to maximize profit by determining the optimum equipment mix and estimating productivity Illustrates the use of production based linear scheduling and stochastic simulations to maximize project cost and schedule certainty This new edition will serve as an essential textbook for students as well as a valuable reference for a wide range of professionals within the construction architecture and engineering industries Quantitative Health Risk Analysis Methods

Louis Anthony Cox Jr.,2006-03-17 This book grew out of an effort to salvage a potentially useful idea for greatly simplifying traditional quantitative risk assessments of the human health consequences of using antibiotics in food animals In 2001 the United States FDA s Center for Veterinary Medicine CVM FDA CVM 2001 published a risk assessment model for potential adverse human health consequences of using a certain class of antibiotics fluoroquinolones to treat flocks of chickens with fatal respiratory disease caused by infectious bacteria CVM s concern was that fluoroquinolones are also used in human medicine raising the possibility that fluoroquinolone resistant strains of bacteria selected by use of fluoroquinolones in chickens might infect humans and then prove resistant to treatment with human medicines in the same class of antibiotics such as ciprofloxacin As a foundation for its risk assessment model CVM proposed a dramatically simple approach that skipped many of the steps in traditional risk assessment The basic idea was to assume that human health risks were directly proportional to some suitably defined exposure metric In symbols Risk K Exposure where Exposure would be defined in terms of a metric such as total production of chicken contaminated with fluoroquinolone resistant bacteria that might cause human illnesses and Risk would describe the expected number of cases per year of human illness due to fluoroquinolone resistant bacterial infections caused by chicken and treated with fluoroquinolones **Construction Equipment**

**Management for Engineers, Estimators, and Owners** Douglas D. Gransberg,Calin M. Popescu,Richard Ryan,2006-06-13 Based on the authors combined experience of seventy years working on projects around the globe Construction Equipment Management for Engineers Estimators and Owners contains hands on how to information that you can put to immediate use Taking an approach that combines analytical and practical results this is a valuable reference for a wide r Statistics
