Making Customers Count:

Making Customers Count David Clutterbuck, Sue Kernaghan, 1991 Making Customers Count started as a collection of case studies of companies which had introduced programmes of customer care But what began as an attempt to identify best practice rapidly became an intensive study of why the majority of customer care schemes go wrong and most importantly how to ensure that schemes do succeed

CUSTOMER SEGMENTATION, CLUSTERING, AND PREDICTION WITH PYTHON Vivian Siahaan, Rismon Hasiholan Sianipar, 2023-07-04 In this book we conducted a customer segmentation clustering and prediction analysis using Python We began by exploring the customer dataset examining its structure and contents The dataset contained various features such as demographic behavioral and transactional attributes To ensure accurate analysis and modeling we performed data preprocessing steps This involved handling missing values removing duplicates and addressing any data quality issues that could impact the results We also split the dataset into features X and the target variable y for prediction tasks Since the dataset had features with different scales and units we applied feature scaling techniques This process standardized or normalized the data ensuring that all features contributed equally to the analysis We then performed regression analysis on the PURCHASESTRX feature which represents the number of purchase transactions made by customers To begin the regression analysis we first prepared the dataset by handling missing values removing duplicates and addressing any data quality issues We then split the dataset into features X and the target variable y with PURCHASESTRX being the target variable for regression We selected appropriate regression algorithms for modeling such as Linear Regression Random Forest Na ve Bayes KNN Decision Trees Support Vector Ada Boost Catboost Gradient Boosting Extreme Gradient Boosting Light Gradient Boosting and Multi Layer Perceptron regressors After training and evaluation we analyzed the performance of the regression models We examined the metrics to determine how accurately the models predicted the number of purchase transactions made by customers A lower MAE and RMSE indicated better predictive performance while a higher R2 score indicated a higher proportion of variance explained by the model Based on the analysis we provided insights and recommendations These could include identifying factors that significantly influence the number of purchase transactions understanding customer behavior patterns or suggesting strategies to increase customer engagement and transaction frequency Next we focused on customer segmentation using unsupervised machine learning techniques K means clustering algorithm was employed to group customers into distinct segments The optimal number of clusters was determined using KElbowVisualizer To gain insights into the clusters we visualized them 3D space Dimensionality PCA reduction technique was used to plot the clusters on scatter plots or 3D plots enabling us to understand their separations and distributions We then interpreted the segments by analyzing their characteristics This involved identifying the unique features that differentiated one segment from another We also pinpointed the key attributes or behaviors that contributed most to the formation of each segment In addition to segmentation we performed clusters

prediction tasks using supervised machine learning techniques Algorithms such as Logistic Regression Random Forest Na ve Bayes KNN Decision Trees Support Vector Ada Boost Gradient Boosting Extreme Gradient Boosting Light Gradient Boosting and Multi Layer Perceptron Classifiers were chosen based on the specific problem The models were trained on the training dataset and evaluated using the test dataset To evaluate the performance of the prediction models various metrics such as accuracy precision recall F1 score and ROC AUC were utilized for classification tasks Summarizing the findings and insights obtained from the analysis we provided recommendations and actionable insights These insights could be used for marketing strategies product improvement or customer retention initiatives
