**Growth Growth Growth** Julian Cobbing, 2024-04-11

*Growth Growth Growth* retells history as a succession of pivotal crises linked to economic growth. Beginning with agriculture ten thousand years ago, each crisis led to an impasse until human ingenuity devised a technical solution to fix it. These solutions included the alphabet, paper, clocks, guns, the printing press, the steam engine, the petrol engine, electricity, nitrogen fertilizer, and the computer. Each solution, however, played a part in the next crisis. Growth driven crises led to the world wars of the first half of the twentieth century, including the atrocities of Stalin, Hitler, and Hiroshima. The brief golden age of capitalism of the 1950s and 1960s gave way to the ultra corporate capitalism that in one variant or another is now the global economic system. Julian Cobbing's lively account exposes the historical roots of our converging problems: the destruction of the environment, the massacre of other species, the running down of oil reserves, global heating, and the nuclear threat to all of us. This time there is no technical solution since we are devouring the Earth's finite resources. Cobbing reminds us that we are just one species in a planetary life system which could dispense with us if we are not needed.

*Savannah River Site at Fifty* Mary Beth Reed, 2002

The heart of the book is a historical treatment of Savannah River Site's operations, its peak period of production, 1953 to 1979. Developments in reactor technology and chemical separations, heavy water production, waste management, and the research goals of the Savannah River Laboratory are described in layman's terms and are amply illustrated. This history profiles the individuals who brought the plant to maturity and explores the two themes that define the nuclear weapons workplace: safety and security.

**Downwind of the Atomic State** James C. Rice, 2025-04-2024

Outstanding Academic Title given by Choice Reviews. How the scientific community overlooked, ignored, and denied the catastrophic fallout of decades of nuclear testing in the American West. In December of 1950, President Harry Truman gave authorization for the Atomic Energy Commission to conduct weapons tests and experiments on a section of a Nevada gunnery range. Over the next eleven years, more than a hundred detonations were conducted at the Nevada Test Site, and radioactive debris dispersed across the communities just downwind and through much of the country. In this important work, James C. Rice tells the hidden story of nuclear weapons testing and the negligence of the US government in protecting public health. *Downwind of the Atomic State* focuses on the

key decisions and events shaping the Commission's mismanagement of radiological contamination in the region specifically on how the risks of fallout were defined and redefined or importantly not defined at all owing to organizational mistakes and the impetus to keep atomic testing going at all costs Rice shows that although Atomic Energy Commission officials understood open air detonations injected radioactive debris into the atmosphere they did not understand or seem to care that the radioactivity would irrevocably contaminate these communities The history of the atomic Southwest should be a wake up call to everyone living in a world replete with large complex organizations managing risky technological systems The legacy of open air detonations in Nevada pushes us to ask about the kinds of risks we are unwittingly living under today What risks are we being exposed to by large organizations under the guise of security and science [Bombing the Marshall Islands](#) Keith M. nation's birth and development pain and sorrow ideals and enduring promise come to life as never before making a once familiar past seem new The Republic of Nature points to a startlingly different version of history that calls on readers to reconnect with fundamental forces that shaped the American experience For more information visit the author's website <http://republicofnature.com> *The Politics of Think Tanks in Europe* Jesper Dahl Kelstrup,2016-05-20

The colossal scale of World War II required a mobilization effort greater than anything attempted in all of the world's history The United States had to fight a war across two oceans and three continents and to do so it had to build and equip a military that was all but nonexistent before the war began Never in the nation's history did it have to create outfit transport and supply huge armies navies and air forces on so many distant and disparate fronts The Axis powers might have fielded better trained soldiers better weapons and better tanks and aircraft but they could not match American productivity The United States buried its enemies in aircraft ships tanks and guns in this sense American industry and American workers won World War II The scale of the effort was titanic and the result historic Not only did it determine the outcome of the war but it transformed the American economy and society Maury Klein's *A Call to Arms* is the definitive narrative history of this epic struggle told by one of America's greatest historians of business and economics and renders the transformation of America with a depth and vividness never available before
