## **Mixed Categories:**

Categorization and Category Change Gianina Iordăchioaia, Isabelle Roy, Kaori Takamine, 2014-07-08 This collection of selected papers addresses theoretical and empirical issues related to lexical categories categorization and category change Any grammatical description makes use of parts of speech The proper set of lexical categories and the definitions of their properties cross linguistically has been a remnant issue in linguistics since the beginnings of grammatical description Besides the traditional classification of lexical classes with their morphological syntactic and or interpretational properties has led to the emergence of mixed categories which are problematic in linguistic theory since the current systems either feature based or syntactic have no means to express fuzziness This volume addresses both these issues in two thematic parts The first part Categories and categorization consists of papers that tackle the problem of defining categories and mixed categories and its reflex on the inventory The second part Issues in category change comprises investigations on category change focusing on nominalizations which is the test ground for a theory of category change and word formation The papers included in this part discuss among others the similarities and mismatches between derived nominals and the corresponding verbs in terms of argument realization and eventive interpretation The languages investigated in the volume include English French German Greek Japanese Romanian Russian Spanish and Swedish This book targets researchers and advanced students in theoretical linguistics

Syntactic Categories Gisa Rauh, 2010-06-03 This book offers a systematic account of syntactic categories the building blocks of sentences and the units of grammatical analysis and explains their description in different formal as well as functional theories of language including language typology Its clear and balanced exposition will be widely welcomed by students

The Adjectival Category D. N. Shankara Bhat, 1994-01-01 This monograph sets out i to establish criteria for differentiating adjectives from other word classes for languages in which they form a distinct category and ii to establish criteria for determining their non identity with words from other categories for languages in which they do not As languages show various gradations in the extent to which adjectives can be distinguished from other word classes the author discusses idealized language types thereby providing a model for the analysis of natural languages The book argues that adjectives do not uniformly show all differentiating characteristics and that these characteristics are semantically relevant and functionally motivated for instance when word classes are used in functions not their own they manifest characteristics of the categories to which the relevant functions belong The second part of the book discusses three distinct idealized languages types without a distinct adjectival category in which property words remain undifferentiated from i nouns ii verbs and iii nouns as well as verbs These three types are shown to represent gradations of distinctions between word classes as they occur in natural languages and to manifest various degrees of the corresponding functional neutralizations In the final chapter the wider theoretical implications of this work for the study of categories are discussed

**The Rise of Functional Categories** Elly van Gelderen, 1993 In recent years word order has come to be seen within a

Government Binding Minimalist framework as determined by functional as well as lexical categories Within this framework functional categories are often seen as present in every language without evidence being available in that language This book contains arguments that even though Universal Grammar makes functional categories available the language learner must decide whether or not to incorporate them in his or her grammar For instance it is shown that English has one not two as often assumed functional category between the complementizer and the Negation but that languages such as Dutch Swedish German and Old and Middle English have none The title of the book can be seen in terms of the direction current research is taking it can also be seen in terms of the changes that have taken place in English

**Decisions and Orders of the National Labor Relations Board** United States. National Labor Relations Board,1995 *Lexical Categories and Root Classes in Amerindian Languages* Ximena Lois,Valentina Vapnarsky,2006 The problem of lexical categories and root class determination is fundamental in linguistic description and theory Research on this topic has been particularly stimulated by studies of Amerindian languages The essays in this collection written by specialists in languages from South Middle and North America provide new insights into processes levels functions and the acquisition of lexical categories from various recent theoretical perspectives The volume also addresses recent debates about root indeterminacy Focusing on morphosyntax phonology and semantics the contributions offer invaluable material for typological generalizations and for comprehension of the nature of the mental lexicon

*The Handbook of Lexical Functional Grammar* Mary Dalrymple,2023-12-14 Lexical Functional Grammar LFG is a nontransformational theory of linguistic structure first developed in the 1970s by Joan Bresnan and Ronald M Kaplan which assumes that language is best described and modeled by parallel structures representing different facets of linguistic organization and information related by means of functional correspondences This volume has five parts Part I Overview and Introduction provides an introduction to core syntactic concepts and representations Part II Grammatical Phenomena reviews LFG work on a range of grammatical phenomena or constructions Part III Grammatical modules and interfaces provides an overview of LFG work on semantics argument structure prosody information structure and morphology Part IV Linguistic disciplines reviews LFG work in the disciplines of historical linguistics learnability psycholinguistics and second language learning Part V Formal and computational issues and applications provides an overview of computational and formal properties of the theory implementations and computational work on parsing translation grammar induction and treebanks Part VI Language families and regions reviews LFG work on languages spoken in particular geographical areas or in particular language families The final section Comparing LFG with other linguistic theories discusses LFG work in relation to other theoretical approaches

**Social Justice** Thomas Hughson,2013-10-10 Many Christians see the societal dimension of their faith as a matter of biblical and social ethics Returning to classical Christology Connecting Jesus to Social Justice explores messianic potential in the Council of Chalcedon on the divine identity of Christ Who Jesus is makes all the difference to Christian entrance into the public sphere on behalf of a just society The Messiah s divinity bears on social mission directed toward a just social order Theological appropriation of Chalcedon overcomes a gap between the professing the Creed and interpreting social existence in light of a just social order Connecting Jesus to Social Justice argues a doctrinally traditional orthodox basis for Christian participation in the public sphere on behalf of social justice The book addresses a situation internal to churches in the U S from a Catholic perspective yet not without analogies in other churches and Christian movements Applying traditional Christology to contemporary social mission solidifies an answer to adversarial queries on the appropriateness of a social agenda Implications in the classical Christology also confirm churches and discipleship in commitment to social justice promoted through a subaltern counter public and then by word and deed in the public sphere *Drivers, trends, and consequences of changing household employment patterns in rural Bangladesh* Sen, Binayak,Dorosh, Paul,Ahmed, Mansur, Van Asselt, Joanna, This paper focuses on rural nonfarm development via the route of salaried employment The

analysis is at the rural household level for two types of households mixed households whereby some workers remain in the farm sector and others pursue nonfarm activities and the rural households who are exclusively dependent on nonfarm employment rural nonfarm The study has produced three major findings First compared with the mixed or farm only households nonfarm households seem to have more income Second nonfarm households discourage unpaid work especially among female workers in sharp contrast to the increasing share of unpaid work in both farm and mixed households Third nonfarm households increasingly rely for their livelihoods on salaried employment which is likely to be of a more durable nature than the juggling of multiple occupations observed in the case of mixed households Analysis of possible factors influencing the formation of nonfarm households shows the importance of human capital non land assets and proximity to larger towns while natural shocks seem to encourage the formation of mixed households and remittance from abroad tends to stimulate the farm orientation

Participles in Rigvedic Sanskrit John J. Lowe,2015-04-23 This book examines several thousand examples of tense aspect stem participles in the Rigveda and the passages in which they appear in terms of both their syntax and semantics The Rigveda is an ancient collection of sacred Indian hymns written in Vedic Sanskrit and is one of the oldest extant texts in any Indo European language It is also a poetic text in which deliberate obscurity is the governing aesthetic and in which the rules of language are pushed to their limits in order to produce the ideal poetic expression Many Vedic sentences are of controversial disputed meaning and Vedic scholarship is thus fraught with controversy John J Lowe applies formal linguistic analysis to the data and produces a comprehensive formal model of how participles are used The author uses his findings to recategorize the data by defining certain stems and stem types as outside the synchronic category of participle on the basis of their syntactic and semantic properties He suggests alternative sources for these forms and considers the linguistic processes that transformed old participles into non participial entities In his conclusion he reassesses the category of participles within the verbal and nominal systems looks at their prehistory in Proto Indo European and describes their universal typological characteristics Among his conclusions are that tense aspect stem participles have the technical properties of adjectival verbs not verbal adjectives and that such participles are not fully dependent on corresponding finite verbal forms That is a perfect participle for example need not share all the semantic and functional features of the finite perfect forms built to the same stem These and many other conclusions drawn either directly challenge or radically revise received opinion and recent work
