Partial Differential Equation

A partial differential equation (PDE) is an equation involving functions and their partial derivatives; for example, the wave equation

$$\frac{\partial^2 \psi}{\partial x^2} + \frac{\partial^2 \psi}{\partial y^2} + \frac{\partial^2 \psi}{\partial z^2} = \frac{1}{v^2} \frac{\partial^2 \psi}{\partial t^2}. \tag{1}$$

Some partial differential equations can be solved exactly in the Wolfram Language using DSolve[eqn, y, {x1, x2}], and numerically using NDSolve[eqns, y, {x, xmin, xmax}, {t, tmin, tmax}].

In general, partial differential equations are much more difficult to solve analytically than are ordinary differential equations. They may sometimes be solved using a Bäcklund transformation, characteristics, Green's function, integral transform, Lax pair, separation of variables, or--when all else fails (which it frequently does)--numerical methods such as finite differences.

Zhmud',1997-12-02 This book discusses character theory and its applications to finite groups The work places the subject within the reach of people with a relatively modest mathematical background The necessary background exceeds the standard algebra course with respect only to finite groups Starting with basic notions and theorems in character theory the authors present a variety of results on the properties of complex valued characters and applications to finite groups The main themes are degrees and kernels of irreducible characters the class number and the number of nonlinear irreducible characters values of irreducible characters characterizations and generalizations of Frobenius groups and generalizations and applications of monomial groups The presentation is detailed and many proofs of known results are new Most of the results in the book are presented in monograph form for the first time Numerous exercises offer additional information on the topics and help readers to understand the main concepts and results

C * -Algebras and Elliptic Operators in Differential Topology I_U_ri_ Petrovich Solov_⬜v Evgeni_ Vadimovich Troit_s_ki_,2000-10-03 The aim of this book is to present some applications of functional analysis and the theory of differential operators to the investigation of topological invariants of manifolds The main topological application discussed in the book concerns the problem of the description of homotopy invariant rational Pontryagin numbers of non simply connected manifolds and the Novikov conjecture of homotopy invariance of higher signatures The definition of higher

signatures and the formulation of the Novikov conjecture are given in Chapter 3 In this chapter the authors also give an overview of different approaches to the proof of the Novikov conjecture First there is the Mishchenko symmetric signature and the generalized Hirzebruch formulae and the Mishchenko theorem of homotopy invariance of higher signatures for manifolds whose fundamental groups have a classifying space being a complete Riemannian non positive curvature manifold Then the authors present Solovyov s proof of the Novikov conjecture for manifolds with fundamental group isomorphic to a discrete subgroup of a linear algebraic group over a local field based on the notion of the Bruhat Tits building Finally the authors discuss the approach due to Kasparov based on the operator KK theory and another proof of the Mishchenko theorem In Chapter 4 they outline the approach to the Novikov conjecture due to Connes and Moscovici involving cyclic homology That allows one to prove the conjecture in the case when the fundamental group is a Gromov hyperbolic group The text provides a concise exposition of some topics from functional analysis for instance C Hilbert modules K theory or C bundles Hermitian K theory Fredholm representations KK theory and functional integration from the theory of differential operators pseudodifferential calculus and Sobolev chains over C algebras and from differential topology characteristic classes The book explains basic ideas of the subject and can serve as a course text for an introduction to the study of original works and special monographs   Physics, Uspekhi ,2001
