select group of experts interested in the long term future of Personal Communications Mobile Computing and other services supported by wireless telecommunications technology This is a fast moving field and we already see in present practice realizations of visions articulated in the earlier Workshops In particular the second generation systems that absorbed the attention of the first WINLAB Workshop are now commercial products It is an interesting reflection on the state of knowledge of wireless communications that the debates about the relative technical merits of these systems have not yet been resolved Meanwhile in the light of United States Government announcements in September 1993 the business and technical communities must confront this year a new generation of Personal Communications Services Here we have applications in search of the best technologies rather than the reverse This is a rare situation in the information business Today's advanced planning and forward looking studies will prevent technology shortages and uncertainties at the end of this decade By then market size and public expectations will surpass the capabilities of the systems of the mid 1990's Third Generation Wireless Information Networks will place greater burdens on technology than their predecessors by offering a wider range of services and a higher degree of service integration
