**Lees' Loss Prevention in the Process Industries**

Frank Lees, 2005-01-25 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident and Piper Alpha to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could without exaggeration be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all encompassing reference. Instead, Frank Lees' world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field, Sam Mannan, who is professor of chemical engineering at Texas A&M. This book contains principles, practice, codes, standards, data and references needed by those practicing in the field.

**Southern Wonder** R. Scot Duncan, Edward O. Wilson, 2013-11-08 Southern Wonder explores Alabama's amazing biological diversity, the reasons for the large number of species in the state and the importance of their preservation. Alabama ranks fifth in the nation in number of species of plants and animals found in the state, surpassed only by the much larger western states of California, Texas, Arizona and New Mexico. When all the species of birds, trees, mammals, reptiles, amphibians, fishes, wildflowers, dragonflies, tiger beetles and ants are tallied, Alabama harbors more species than 90 percent of the other states in the United States. Alabama is particularly rich in aquatic biodiversity, leading the nation in species of freshwater fishes, turtles, mussels, crayfish, snails, damselflies and carnivorous plants. The state also hosts an exceptional number of endemic species, those not found beyond its borders, ranking seventh in the nation with 144 species. The state's 4,533 species, with more being inventoried and discovered each year, are supported by no less than 64 distinct ecological systems, each a unique blend of soil, water, sunlight, heat and natural disturbance regimes. Habitats include dry forests, moist forests, swamp forests, sunny prairies, grassy barrens, scorching glades, rolling dunes and bogs filled with pitcher plants and sundews. The state also includes a region of subterranean ecosystems that are more elaborate and species rich than any other place on the continent. Although Alabama is teeming with life, the state's prominence as a refuge for plants and animals is poorly appreciated. Even among Alabama's citizens, few outside a small circle of biologists, advocates and other naturalists

understand the special quality of the state's natural heritage R Scot Duncan rectifies this situation in *Southern Wonder* by providing a well written comprehensive overview that the general public policy makers and teachers can understand and use Readers are taken on an exploratory journey of the state's varied landscapes from the Tennessee River Valley to the coastal dunes and are introduced to remarkable species such as the cave salamander and the beach mouse By interweaving the disciplines of ecology evolution meteorology and geology into an accessible whole Duncan explains clearly why Alabama is so biotically rich and champions efforts for its careful preservation Published in Cooperation with The Nature Conservancy
