Verification of Temporal Properties of Processes in a Setting with Data Jan Friso Groote, Centrum voor Wiskunde en Informatica (Amsterdam, Netherlands), R. Mateescu, 1998 Abstract We define a value based modal μ calculus built from first order formulas modalities and fixed point operators parameterized by data variables which allows to express temporal properties involving data We interpret this logic over μ CRL terms defined by linear process equations The satisfaction of a temporal formula by a μ CRL term is translated to the satisfaction of a first order formula containing parameterized fixed point operators We provide proof rules for these fixed point operators and show their applicability on various examples

Introduction to Process Algebra Wan Fokkink, 2013-03-09 Automated and semi automated manipulation of so called labelled transition systems has become an important means in discovering flaws in software and hardware systems Process algebra has been developed to express such labelled transition systems algebraically which enhances the ways of manipulation by means of equational logic and term rewriting The theory of process algebra has developed rapidly over the last twenty years and verification tools have been developed on the basis of process algebra often in cooperation with techniques related to model checking This textbook gives a thorough introduction into the basics of process algebra and its applications
