Model Buildings And How To Make Them:

Boland, 2014 Concern about the role and the limits of modeling has heightened after repeated questions were raised regarding the dependability and suitability of the models that were used in the run up to the 2008 financial crash In this book Lawrence Boland provides an overview of the practices of and the problems faced by model builders to explain the nature of models the modeling process and the possibility for and nature of their testing In a reflective manner the author raises serious questions about the assumptions and judgments that model builders make in constructing models In making his case he examines the traditional microeconomics macroeconomics separation with regard to how theoretical models are built and used and how they interact paying particular attention to the use of equilibrium concepts in macroeconomic models and game theory and to the challenges involved in building empirical models testing models and using models to test theoretical explanations **Group Model Building** Rodney Scott, 2018-06-12 This book describes the cognitive and interpersonal effects of group model building and presents empirical research on what group model building achieves and how Further it proposes an integrated causal mechanism for the effects on participants There have been multiple previous attempts at explaining the effects of group model building on participants and this book integrates these various theories for the first time The causal mechanisms described here suggest a variety of design elements that should be included in group model

building practice For example practitioners typically try to reduce complexity for clients to make the process feel more accessible In contrast the findings presented here suggest that the very act of muddling through complexity increases participants affective commitment to the group and the decisions made The book also describes implications for theory and practice System dynamics has traditionally been interested in using technical modeling processes to make policy recommendations Group model building demonstrates that these same techniques also have implications for group decision making as a method for negotiating agreement The book argues for the value of group model building as a mediating or negotiating tool rather than merely a positivist tool for technical problems

Theory Construction and Model-Building Skills James Jaccard, Jacob Jacoby, 2020-02-06 This book provides young scientists with tools to assist them in the practical aspects of theory construction We take an informal journey through the cognitive heuristics tricks of the trade and ways of thinking that we have found to be useful in developing theories essentially conceptualizations that can advance knowledge in the social sciences This book is intended to provide the instructor with a useful source for helping students come up with ideas for research and for fine tuning the resultant theories that emerge from such thinking An objective of this book is to move toward a needed balance in the emphases given to theory construction and theory testing

Model Building in Mathematical Programming H. Paul Williams, 2013-01-18 The 5th edition of Model Building in Mathematical Programming discusses the general principles of model building in mathematical programming and demonstrates how they can be applied by using several simplified but practical problems from widely different contexts Suggested formulations and solutions are given together with some computational experience to give the reader a feel for the computational difficulty of solving that particular type of model Furthermore this book illustrates the scope and limitations of mathematical programming and shows how it can be applied to real situations By emphasizing the importance of the building and interpreting of models rather than the solution process the author attempts to fill a gap left by the many works which concentrate on the algorithmic side of the subject In this article H P Williams explains his original motivation and objectives in writing the book how it has been modified and updated over the years what is new in this edition and why it has maintained its relevance and popularity over the years <http://www.statisticsviews.com/details/feature/4566481/Model-Building-in-Mathematical-Programming-published-in-fifth-edition.html>

Creative Ship Model Making Gerhard O.W. Fischer, It is often annoying that every kit model built from the same kit of the same company is like one egg from the other This is what creative ship modelling aims to change Using prefabricated hulls it is mainly a matter of the superstructure which must be redesigned sawn out and further processed and further processed without the need for a construction template The conversion of kit models shows how to convert ready built models to a completely new model by converting them to jet propulsion Finally the author presents four examples how larger display models can be converted into real driving models to properly running RC

ship models by installing a remote control system From the content Construction of models according to own designs Building description of two creative models Building a police boat according to own ideas Two creative construction models The MULTIBOAT A speedboat and a mega luxury yacht Conversion of kit models The FLORIDA as a jet model The RAPIDO 600 as a jet model A customs cruiser and a fishery protection boat Conversion of display models to RC models Cruise ship QUEEN MARY 2 Sea rescue cruiser HERMANN MARWEDE German submarine class VII C American submarine GATO class REVELL RC ship model already at the end of the 50s

Building Implementable Marketing Models Philippe A. Naert, Peter S.H. Leeflang, 2013-12-01 The observation that many models are built but few are used has almost become a commonplace in the management science and operations research literature Nevertheless the statement remains to a large extent true today also and perhaps even more so where marketing models are concerned This led Philippe Naert now about four years ago to write a concept text of a few hundred pages on the subject of how to build implementable marketing models that is models that can and will be used One of the readers of that early manuscript was Peter Leeflang He made suggestions leading to a more consistent ordering of the material and proposed the addition of some topics and the expansion of others to make the book more self contained This resulted in a co authorship and a revised version which was written by Peter Leeflang and consisted of a reshuffling and an expansion of the original material by about fifty per cent Several meetings between the co authors produced further refinements in the text and the sequence of chapters and sections after which Philippe Naert again totally reworked the whole text This led to a new expansion again by fifty per cent of the second iteration The third iteration also required the inclusion of a great deal of new literature indicating that the field is making fast progress and that implementation has become a major concern to marketing model builders

The Methodology of Economic Model Building (Routledge Revivals) Lawrence A. Boland, 2014-05-01 The major methodological task for modern economists has been to establish the testability of models Too often however methodological assumptions can make a model virtually impossible to test even under ideal conditions yet few theorists have examined the requirements and problems of assuring testability in economics In *The Methodology of Economic Model Building* first published in 1989 Lawrence Boland presents the results of a research project that spanned more than twenty years He examines how economists have applied the philosophy of Karl Popper relating methodological debates about falsifiability to wider discussions about the truth status of models in natural and social sciences He concludes that model building in economics reflects more the methodological prescriptions of the economist Paul Samuelson than Popper's falsificationism This title will prove invaluable to both students and researchers and represents a substantial contribution to debates about the scientific status of economics
