Human Compatible Stuart Russell, 2019-10-08 The most important book on AI this year The Guardian Mr Russell s exciting book goes deep while sparkling with dry witticisms The Wall Street Journal The most important book I have read in quite some time Daniel Kahneman A must read Max Tegmark The book we ve all been waiting for Sam Harris A leading artificial intelligence researcher lays out a new approach to AI that will enable us to coexist successfully with increasingly intelligent machines In the popular imagination superhuman artificial intelligence is an approaching tidal wave that threatens not just jobs and human relationships but civilization itself Conflict between humans and machines is seen as inevitable and its outcome all too predictable In this groundbreaking book distinguished AI researcher Stuart Russell argues that this scenario can be avoided but only if we rethink AI from the ground up Russell begins by exploring the idea of intelligence in humans and in machines He describes the near term benefits we can expect from intelligent personal assistants to vastly accelerated scientific research and outlines the AI breakthroughs that still have to happen before we reach superhuman AI He also spells out the ways humans are already finding to misuse AI from lethal autonomous weapons to viral sabotage If the predicted breakthroughs occur and superhuman AI emerges we will have created entities far more powerful than ourselves How can we ensure they never ever have power over us Russell suggests that we can rebuild AI on a new foundation according to which machines are designed to be inherently uncertain about the human preferences they are required to satisfy Such machines would be humble altruistic and committed to pursue our objectives not theirs This new foundation would allow us to create machines that are provably deferential and provably beneficial
