## **Model Neural Networks And Behavior:**

**Model Neural Networks and Behavior** Allen Selverston, 2014-01-15

Allen I. Selverston, 1985-08 The most conspicuous function of the nervous system is to control animal behavior. From the complex operations of learning and mentation to the molecular configuration of ionic channels the nervous system serves as the interface between an animal and its environment. To study and understand the fundamental mechanisms underlying the control of behavior it is often both necessary and desirable to employ biological systems with characteristics especially suitable for answering specific questions. In neurobiology many invertebrates have become established as model systems for investigations at both the systems and the cellular level. Large readily identifiable neurons have made invertebrates especially useful for cellular studies. The fact that these neurons occur in much smaller numbers than those in higher animals also makes them important for circuit analysis. Although important differences exist, some of the questions that would be technically impossible to answer with vertebrates can become experimentally tractable with invertebrates.

*Modeling Human and Organizational Behavior* National Research Council, Division of Behavioral and Social Sciences and Education, Board on Human-Systems Integration, Panel on Modeling Human Behavior and Command Decision Making: Representations for Military Simulations, 1998-07-31 Simulations are widely used in the military for training personnel analyzing proposed equipment and rehearsing missions and these simulations need realistic models of human behavior. This book draws together a wide variety of theoretical and applied research in human behavior modeling that can be considered for use in those simulations. It covers behavior at the individual unit and command level. At the individual soldier level the topics covered include attention learning memory decisionmaking perception situation awareness and planning. At the unit level the focus is on command and control. The book provides short medium and long term goals for research and development of more realistic models of human behavior.

Levine, Wesley R.

Elsberry, 2013-06-17 This book is the third in a series based on conferences sponsored by the Metroplex Institute for Neural Dynamics an interdisciplinary organization of neural network professionals in academia and industry The topics selected are of broad interest to both those interested in designing machines to perform intelligent functions and those interested in studying how these functions are actually performed by living organisms and generate discussion of basic and controversial issues in the study of mind The topic of optimality was chosen because it has provoked considerable discussion and controversy in many different academic fields There are several aspects to the issue of optimality First is it true that actual behavior and cognitive functions of living animals including humans can be considered as optimal in some sense Second what is the utility function for biological organisms if any and can it be described mathematically Rather than organize the chapters on a biological versus artificial basis or by what stance they took on optimality it seemed more natural to organize them either by what level of questions they posed or by what intelligent functions they dealt with The book begins with some

general frameworks for discussing optimality or the lack of it in biological or artificial systems The next set of chapters deals with some general mathematical and computational theories that help to clarify what the notion of optimality might entail in specific classes of networks The final section deals with optimality in the context of many different high level issues including exploring one's environment understanding mental illness linguistic communication and social organization The diversity of topics covered in this book is designed to stimulate interdisciplinary thinking and speculation about deep problems in intelligent system organization
