Paul Erdos And His Mathematics:

Paul Erdős and His Mathematics Gabor Halasz, Laszlo Lovasz, Miklos Simonovits, Vera T. Sós, 2002-10-31 Since his death in 1996 many scientific meetings have been dedicated to the memory of Paul Erdős. From July 4 to 11 1999 the conference Paul Erdős and his Mathematics was held in Budapest with the ambitious goal of showing the whole range of Erdős' work a difficult task in view of Erdős' versatility and his broad scope of interest in mathematics. According to this goal the topics of lectures given by the leading specialists of the subjects included number theory combinatorics analysis set theory probability geometry and areas connecting them like ergodic theory. The conference has contributed to changing the common view that Erdős worked only in combinatorics and combinatorial number theory. In the present two volumes the editors have collected besides some personal reminiscences by Paul's old friends mainly survey articles on his work and on areas he initiated or worked in.

Paul Erdős and His Mathematics Gábor Halász, 2002 [The Mathematics of Paul Erdős I](#) Ronald L. Graham, Jaroslav Nešetřil, Steve Butler, 2013-08-04 This is the most comprehensive survey of the mathematical life of the legendary Paul Erdős 1913-1996 one of the most versatile and prolific mathematicians of our time. For the first time all the main areas of Erdős' research are covered in a single project. Because of overwhelming response from the mathematical community the project now occupies over 1000 pages arranged into two volumes. These volumes contain both high level research articles as well as key articles that survey some of the cornerstones of Erdős' work each written by a leading world specialist in the field. A special chapter Early Days rare photographs and art related to Erdős complement this striking collection. A unique contribution is the bibliography on Erdős' publications the most comprehensive ever published. This new edition dedicated to the 100th anniversary of Paul Erdős' birth contains updates on many of the articles from the two volumes of the first edition several new articles from prominent mathematicians a new introduction more biographical information about Paul Erdős and an updated list of publications. The first volume contains the unique chapter Early Days which features personal memories of Paul Erdős by a number of his colleagues. The other three chapters cover number theory random methods and geometry. All of these chapters are essentially updated most notably the geometry chapter that covers the recent solution of the problem on the number of distinct distances in finite planar sets which was the most popular of Erdős' favorite geometry problems.

[The Mathematics of Paul Erdős I](#) Ronald Lewis Graham, Jaroslav Nešetřil, 2012-12-06 In 1992 when Paul Erdős was awarded a Doctor Honoris Causa by Charles University in Prague a small conference was held bringing together a distinguished group of researchers with interests spanning a variety of fields related to Erdős' own work. At that gathering the idea occurred to several of us that it might be quite appropriate at this point in Erdős' career to solicit a collection of articles illustrating various aspects of Erdős' mathematical life and work. The response to our solicitation was immediate and overwhelming and these volumes are the result. Regarding the organization we found it convenient to arrange the papers into six chapters each mirroring Erdős' holistic approach to mathematics. Our goal was not merely a random

collection of papers but rather a thoroughly edited volume composed in large part by articles explicitly solicited to illustrate interesting aspects of Erdos and his life and work Each chapter includes an introduction which often presents a sample of related Erdos problems in his own words All these sometimes lengthy introductions were written jointly by editors We wish to thank the nearly 70 contributors for their outstanding efforts and their patience In particular we are grateful to Bela Bollobas for his extensive documentation of Paul Erdos early years and mathematical high points in the first part of this volume our other authors are acknowledged in their respective chapters We also want to thank A Bondy G Hahn I

The Man Who Loved Only Numbers Paul Hoffman, 2024-05-07 A funny marvelously readable portrait of one of the most brilliant and eccentric men in history The Seattle Times Paul Erdos was an amazing and prolific mathematician whose life as a world wandering numerical nomad was legendary He published almost 1500 scholarly papers before his death in 1996 and he probably thought more about math problems than anyone in history Like a traveling salesman offering his thoughts as wares Erdos would show up on the doorstep of one mathematician or another and announce My brain is open After working through a problem he'd move on to the next place the next solution Hoffman's book like Sylvia Nasar's biography of John Nash A Beautiful Mind reveals a genius's life that transcended the merely quirky But Erdos's brand of madness was joyful unlike Nash's despairing schizophrenia Erdos never tried to dilute his obsessive passion for numbers with ordinary emotional interactions thus avoiding hurting the people around him as Nash did Oliver Sacks writes of Erdos A mathematical genius of the first order Paul Erdos was totally obsessed with his subject he thought and wrote mathematics for nineteen hours a day until the day he died He traveled constantly living out of a plastic bag and had no interest in food sex companionship art all that is usually indispensable to a

human life The Man Who Loved Only Numbers is easy to love despite his strangeness It s hard not to have affection for someone who referred to children as epsilons from the Greek letter used to represent small quantities in mathematics a man whose epitaph for himself read Finally I am becoming stupider no more and whose only really necessary tool to do his work was a quiet and open mind Hoffman who followed and spoke with Erdos over the last 10 years of his life introduces us to an undeniably odd yet pure and joyful man who loved numbers more than he loved God whom he referred to as SF for Supreme Fascist He was often misunderstood and he certainly annoyed people sometimes but Paul Erdos is no doubt missed Therese Littleton
