specifying appropriate research methods and techniques for investigation along with a specific research design providing an operational framework that translates developed theory into empirical practice The book's primary contribution therefore lies in its delineation of a holistic research programme to conceptualise the property market as an institution and to explore its role within the urban economy Regional Economic Outlook, October 2015: Western Hemisphere Department International Monetary Fund. Western Hemisphere Dept., 2015-10-07 Economies in the Western Hemisphere are generally seeing a slowdown in growth The U S economy regained momentum after a slow start at the beginning of the year while in Latin America and the Caribbean economic activity continues to decelerate Stronger U S growth should benefit countries in the region especially those with tighter links through trade remittances and tourism Mexico Central America and the Caribbean Weaker commodity prices for the foreseeable future however will continue to hurt South America's net commodity exporters lowering national incomes reducing investment and worsening fiscal balances These developments could in turn impede progress made in recent years in poverty reduction These developments could in turn impede progress made in recent years in poverty reduction Key risks including an abrupt tightening of U S interest rates or a further slowdown in China may disproportionately affect Latin America Chapters in this report examine monetary policy in Latin America including the region's exposure to global financial shocks the role of value chains and regional trade agreements in fostering trade integration and financial market development in the region **Rural Wealth Creation** John L. Pender, Bruce A. Weber, Thomas G. Johnson, J. Ms.Dalia Hakura,Mr.Mumtaz Hussain,Ms.Monique Newiak,Vimal Thakoor,Mr.Fan Yang,2016-06-08 A growing body of empirical evidence suggests that inequality income or gender related can impede economic growth Using dynamic panel regressions and new time series data this paper finds that both income and gender inequalities including from legal gender based restrictions are jointly negatively associated with per capita GDP growth Examining the relationship for countries at different stages of development we find that this effect prevails mainly in lower income countries In particular per capita income growth in sub Saharan Africa could be higher by as much as 0.9 percentage points on average if inequality was reduced to the levels observed in the fastgrowing emerging Asian countries High levels of income inequality in sub Saharan Africa appear partly driven by structural features However the paper s findings show that policies that influence the opportunities of low income households and women to participate in economic activities also matter and therefore if well designed and targeted could play a role in alleviating inequalities **The Oxford Handbook of the Mauritian Economy**
