Numerous studies demonstrate that deficits in emotion regulation skills are likely to help maintain various forms of psychological disorders. Thus enhancing emotion regulation has become a major target in psychotherapeutic treatments. For this purpose a number of therapeutic strategies have been developed and shown to be effective. However for practitioners it is often difficult to decide which of these strategies they should use or how they can effectively combine empirically validated strategies. Thus the authors developed the Affect Regulation Training as a transdiagnostic intervention which systematically integrates strategies from cognitive behavior therapy, mindfulness based interventions, emotion focused therapy and dialectical behavioral therapy. The effectiveness of ART has been demonstrated in several high quality studies.

Emotion Regulation in Couples and Families Douglas K. Snyder, Jeffrey A. Simpson, Jan N. Hughes, 2009. The burgeoning literature on managing one's emotions underscores the importance both Western society and psychology place on emotion regulation. Notably the ability to effectively control and manage emotions during social interactions plays a pivotal role in health and interpersonal functioning. Are certain ways of handling emotions better than others? If so can individuals successfully apply these methods to self regulate their emotions? How do parents help their children learn to regulate their emotions? How do we best research emotion regulation processes in individuals, couples and families? Emotion Regulation in Couples and Families addresses these and other critical theoretical and methodological issues in the rapidly advancing field of emotion regulation. It presents empirical findings linking emotion regulation to individual and relationship functioning across the life span while providing implications for clinical intervention, public policy and future research. Contributors who are widely recognized for their expertise in social, developmental and clinical disciplines offer diverse perspectives on the role of emotion regulation processes in dysfunction and health. In addition to advancing the latest empirical developments, this volume will be a prime resource for graduate students and practitioners working with children, couples and families for whom emotion regulation difficulties are targets of clinical intervention. The Development of Emotion Regulation and Dysregulation Judy Garber, 1991-05-31. Provides a developmental perspective of the regulation and dysregulation of emotion in particular how children learn about feelings and how they learn to deal with both positive and negative feelings. Emotion regulation involves the interaction of physical, behavioral and cognitive processes in response to changes in one's emotional state. The changes can be brought on by factors internal to the individual (e.g. biological) or external (e.g. other people). Featuring contributions from leading researchers in developmental psychopathology, the volume concentrates on recent theories and data concerning the development of emotion regulation with an emphasis on both intrapersonal and interpersonal processes. Original conceptualizations of the reciprocal influences among the various response systems (neurophysiological, biochemical, behavioral, expressive and subjective/experiential) are provided and the individual chapters address both normal and psychopathological forms of emotion regulation, particularly depression and aggression from infancy through adolescence. This book will appeal to specialists in developmental, clinical and social
