*Cumulated Index Medicus*, 1994 *Rho GTPases* Marc H. Symons, 2004-05-31 Members of the Rho family of small GTP binding proteins GTPases are key signal transduction proteins

that mediate signals initiated by growth factors cytokines and cell adhesion proteins Our knowledge about Rho GTPases has rapidly expanded over the past several years and Rho GTPases is the first book to provide a comprehensive overview of the regulation and functions of this important class of proteins This book includes several chapters dedicated to the review of various classes of proteins that control the localization and activation state of Rho GTPases Additional chapters discuss the wide range of biological functions that are controlled by Rho GTPases including the organization of the actin cytoskeleton cell proliferation and cell motility Rho GTPases is essential reading for cell and molecular biologists biochemists and geneticists The critical roles of Rho family members in cancer and inflammatory diseases makes Rho GTPases also an invaluable guide for clinical investigators and pharmacologists Cancer Genome and Tumor Microenvironment Andrei Thomas-Tikhonenko, 2010-01-23 Oncogenes and tumor suppressor genes had been traditionally studied in the context of cell proliferation differentiation senescence and survival four relatively cell autonomous processes Consequently in the late 80s early 90s neoplastic growth was described largely as an imbalance between net cell accumulation and loss brought about through mutations in cancer genes In the last ten years a more holistic understanding of cancer has slowly emerged stressing the importance of interactions between neoplastic and various stromal components extracellular matrix basement membranes fibroblasts endothelial cells of blood and lymphatic vessels tumor infiltrating lymphocytes etc The commonly held view is that changes in tumor microenvironment are soft wired i e epigenetic in nature and often reversible Yet there exists a large body of evidence suggesting that well known mutations in cancer genes profoundly affect tumor milieu In fact these non cell autonomous changes might be one of the primary reasons such mutations are preserved in late stage tumors
