Tucker, M.D., 2021-04-13 A fully updated 2 in 1 edition with a new introduction by the author combining Dr Jim B Tucker s bestselling books about children who remember past lives *Return to Life* and *Life Before Life* These two books contain first person accounts of Jim B

Tucker's experiences with a number of extraordinary children with memories of past lives and expands on the international work started by Tucker's University of Virginia colleague Ian Stevenson. Tucker's work has been lauded by the likes of parapsychologist Carol Bowman and Deepak Chopra and has been described by some as quantum physics. His goal in each case of a child reporting memories of previous lives is to determine what happened, what the child has said, how the parents have reacted, whether the child's statements match the life of a particular deceased person, and whether the child could have learned such information through normal means. Tucker has found case studies that provide persuasive evidence that some children do in fact possess memories of previous lives. Thought provoking and captivating the stories in *Before* urge readers, skeptics and supporters alike to think about life, death and reincarnation and to reflect about their own consciousness and spirituality.

***Religious Behaviour and Spiritual Experience*** Ashit Chandra Chakraborty, Swami Priyavratana, 2015-12-23

Spiritual life and its experiences seem to elude ordinary understanding. Can spiritual truths be investigated by scientific techniques? Why do people take to spiritual life? Is there a scientific truth behind supra-normal experiences? This book, published by Advaita Ashrama, a publication centre of Ramakrishna Math, Belur Math, India, deals with scientific exploration of spiritual experiences and answers these questions.

**Randi's Prize** Robert McLuhan, 2010

James The Amazing Randi is a stage magician who says he has a million dollars for anyone who can convince him they have psychic powers. No one has even come close to winning. Proof say sceptical scientists that there is no such thing as the paranormal. But are they right? In this illuminating and often provocative analysis, Robert McLuhan examines the influence of Randi and other debunking sceptics in shaping scientific opinion about such things as telepathy, psychics, ghosts and near death experiences. He points out that scientific researchers who investigate these things at first hand overwhelmingly consider them to be genuinely anomalous. But this has shocking implications for science, for society and for even perhaps for ourselves as individuals. Hence the sceptics' insistence that they should rather be attributed to fraud, imagination and wishful thinking. However, this extraordinary and little understood aspect of consciousness has much to tell us about the human situation, McLuhan suggests. And at a time when militants are polarising the debate about religion, its mystical, spiritual element offers an optimistic and enlightened way forward. Randi's Prize is aimed at anyone interested in spirituality or those curious to know the truth about paranormal claims. It's an intelligent and readable analysis of scientific research into the paranormal which uniquely also closely examines the arguments of well known sceptics.

**Exploring Frontiers of the Mind-Brain Relationship** Alexander Moreira-Almeida, Franklin Santana Santos, 2011-11-25

The conscious mind defines human existence. Many consider the brain as a computer and they attempt to explain consciousness as emerging at a critical but unspecified threshold level of complex computation among neurons. The brain as computer model, however, fails to account for phenomenal experience and portrays consciousness as an impotent after-the-fact epiphenomenon lacking causal power. And the brain as computer concept precludes even the remotest possibility of spirituality. As described throughout the history of humankind, seemingly spiritual

mental phenomena including transcendent states near death and out of body experiences and past life memories have in recent years been well documented and treated scientifically. In addition, the brain as computer approach has been challenged by advocates of quantum brain biology who are possibly able to explain scientifically nonlocal seemingly spiritual mental states. Exploring Frontiers of the Mind Brain Relationship argues against the purely physical analysis of consciousness and for a balanced psychobiological approach. This thought provoking volume bridges philosophy of mind with science of mind to look empirically at transcendent phenomena such as mystic states near death experiences and past life memories that have confounded scientists for decades. Representing disciplines ranging from philosophy and history to neuroimaging and physics and boasting a panel of expert scientists and physicians including Andrew Newberg, Peter Fenwick, Stuart Hameroff, Mario Beauregard, Deepak Chopra, and Chris Clarke, the book rigorously follows several lines of inquiry into mind brain controversies, challenging readers to form their own conclusions or reconsider previous ones. Key coverage includes: Objections to reductionistic materialism from the philosophical and the scientific tradition; Phenomena and the mind brain problem; The neurobiological correlates of meditation and mindfulness; The quantum soul: a view from physics; Clinical implications of end of life experiences; Mediumistic experience and the mind brain relationship. Exploring Frontiers of the Mind Brain Relationship is essential reading for researchers and clinicians across many disciplines including cognitive psychology, personality and social psychology, the neurosciences, neuropsychiatry, palliative care, philosophy, and quantum physics. This book brings together some precious observations about the fundamental mystery of the nature of consciousness. It raises many questions that serve to invite each of us to be more aware of the uncertainty of our preconceptions about consciousness. This book on the frontiers of mind body relationships is a scholarly embodiment of creative and open minded science.

Science, the Self, and Survival after Death Emily Williams Kelly, 2012-12-21

Ian Stevenson was a prominent and internationally known psychiatrist, researcher and well regarded figure in the field of psychical research. Science, the Self, and Survival after Death is the first book devoted to surveying the entirety of his work and the extraordinary scope and variety of his research. He studied universal questions that cut to the core of a person's identity: What is consciousness? How did we become the unique individuals that we are? Do we survive in some form after death? Stevenson's writings on the nature of science and the mind body relationship, as well as his empirical research, demonstrate his strongly held belief that the methods of science can be applied successfully to such humanly vital questions. Featuring a selection of his papers and excerpts from his books, this collection presents the larger context of Stevenson's work and illustrates the issues and questions that guided him throughout his career.
