The Present Relations of Science to Religion Frederick Temple (abp. of Canterbury.), 1860

Facts and Fancies in Modern Science: Studies of the Relations of Science to Prevalent Speculations and Religious Belief Sir John William Dawson, 2020-09-28 The infidelity and the contempt for sacred and spiritual things which pervade so much of our modern literature are largely attributable to the prevalence of that form of philosophy which may be designated as Agnostic Evolution and this in its turn is popularly regarded as a result of the pursuit of physical and natural science The last conclusion is obviously only in part if at all correct since it is well known that atheistic philosophical speculations were pursued quite as boldly and ably as now long before the rise of modern science Still it must be admitted that scientific discoveries and principles have been largely employed in our time to give form and consistency to ideas otherwise very dim and shadowy and thus to rehabilitate for our benefit the philosophical dreams of antiquity in a more substantial shape In this respect the natural sciences or rather the facts and laws with which they are conversant merely share the fate of other things Nothing however indifferent in itself can come into human hands without acquiring thereby an ethical social political or even religious significance An ounce of lead or a dynamite cartridge may be in itself a thing altogether destitute of any higher significance than that depending on physical properties but let it pass into the power of man and at once infinite possibilities of good and of evil cluster round it according to the use to which it may be applied This depends on essential powers and attributes of man himself of which he can no more be deprived than matter can be denuded of its inherent properties and if the evils arising from misuse of these powers trouble us we may at least console ourselves with the reflection that the possibility of such evils shows man to be a free agent and not an automaton All this is eminently

applicable to science in its relation to agnostic speculations The material of the physical and natural sciences consists of facts ascertained by the evidence of our senses and for which we depend on the truthfulness of those senses and the stability of external nature Science proceeds by comparison of these facts and by inductive reasoning to arrange them under certain general expressions or laws So far all is merely physical and need have no connection with our origin or destiny or relation to higher powers But we ourselves are a part of the nature which we study and we cannot study it without more or less thinking our own thoughts into it Thus we naturally begin to inquire as to origins and first causes and as to the source of the energy and order which we perceive and to these questions the human mind demands some answer either actual or speculative But here we enter into the domain of religious thought or that which relates to a power or powers beyond and above nature Whatever forms our thoughts on such subjects may take these depend not directly on the facts of science but on the reaction of our minds on these facts They are truly anthropomorphic It has been well said that it is as idle to inquire as to the origin of such religious ideas as to inquire as to the origin of hunger and thirst Given the man they must necessarily exist Now whatever form these philosophical or religious ideas may take whether that of Agnosticism or Pantheism or Theism science properly so called has no right to be either praised or blamed Its material may be used but the structure is the work of the artificer himself

Chronicles the critical role the sciences have played in American foreign relations since World War II The Sciences' Media Connection -Public Communication and its Repercussions Simone Rödder, Martina Franzen, Peter Weingart, 2011-12-02

The Yearbook addresses the overriding question what are the effects of the opening up of science to the media Theoretical considerations and a host of empirical studies covering different configurations provide an in depth analysis of the sciences media connection and its repercussions on science itself They help to form a sound judgement on this recent development

Design Methodology and Relationships with Science Marc J de Vries, Nigel Cross, D.P. Grant, 1993-03-31 Many business corporations are faced with the challenge of bringing together quite different types of knowledge in design processes knowledge of different disciplines in the natural and engineering sciences knowledge of markets and market trends knowledge of political and juridical affairs This also means a challenge for design methodology as the academic discipline that studies design processes and methods The aim of the NATO ARW of which this book is the report was to bring together colleagues from different academic fields to discuss this increasing multidisciplinary in the relationship between design and sciences This multidisciplinary made the conference a special event At a certain moment one of the participants exclaimed This is not a traditional design methodology conference Throughout the conference it was evident that there was a need to develop a common language and understanding to enable the exchange of different perspectives on design and its relationship with science The contributions that have been included in this book show these different perspectives the philosophical the historical the engineering perspective and the practical designer s experience
