Shiing-Shen Chern, Friedrich Hirzebruch, 2000      **Modern Crystallography III** A.A. Chernov, 2012-12-06 Early in this century the newly discovered x ray diffraction by crystals made a complete change in crystallography and in the whole science of the atomic structure of matter thus giving a new impetus to the development of solid state physics Crystallographic methods primarily x ray diffraction analysis penetrated into materials sciences molecular physics and chemistry and also into many other branches of science Later electron and neutron diffraction structure analyses became important since they not only complement x ray data but also supply new information on the atomic and the real structure of crystals Electron microscopy and other modern methods of investigating matter optical electronic paramagnetic nuclear magnetic and other resonance techniques yield a large amount of information on the atomic electronic and real crystal structures Crystal physics has also undergone vigorous development Many remarkable phenomena have been discovered in crystals and then found various practical applications Other important factors promoting the development of crystallography were the elaboration of the theory of crystal growth which brought crystallography closer to thermodynamics and physical chemistry and the development of the various methods of growing synthetic crystals dictated by practical needs Man made crystals became increasingly important for physical investigations and they rapidly invaded technology The production of synthetic crystals made a tremendous impact on the traditional branches the mechanical treatment of materials precision instrument making and the jewelry industry

Russia before the First World War and how they were inculcated in the public The causes of the First World War have been studied and debated for many decades yet cultural historians of Germany have largely neglected the German Russian aspect of the conflict for a focus on the clash of Germany and Great Britain When they have focused on Germany and Russia they have too often dismissed the anti Russian propaganda of the war s first months as a sudden and opportunistic campaign to justify the war This intellectual and cultural history gives German attitudes toward and stereotypes of Russia their due re examining them through the lens of German national identity and revealing an evolving obsession with Russia during the quarter century leading up to the war when Germany came to consider itself a Western nation with Russia to use Edward Said s terminology as an Oriental other While historians have addressed the issue of an Oriental Russia this book extends the analysis beyond traditional intellectual history s focus on cultural elites by studying the construction of Russia in school textbooks newspapers and the writings of academics Drawing upon the work of Said J rgen Habermas Sander Gilman and Pierre Bourdieu Troy Paddock demonstrates that public debate on Russia was based on common assumptions and contends that these assumptions which resulted in the ascendancy of a view of Russia as the Slavic peril in the last few years before the war were ingrained in the public through education Troy Paddock is Professor of History at Southern Connecticut State University
