Queen's Guard patrols Shanghai's Thames Town where pubs and statues of Winston Churchill abound. Gleaming replicas of the White House dot Chinese cities from Fuyang to Shenzhen. These examples are but a sampling of China's most popular and startling architectural movement: the construction of monumental themed communities that replicate towns and cities in the West. *Original Copies* presents the first definitive chronicle of this remarkable phenomenon in which entire townships appear to have been airlifted from their historic and geographic foundations in Europe and the Americas and spot-welded to Chinese cities. These copycat constructions are not theme parks but thriving communities where Chinese families raise children, cook dinners, and simulate the experiences of a pseudo Orange County or Oxford. In recounting the untold and evolving story of China's predilection for replicating the greatest architectural hits of the West, Bianca Bosker explores what this unprecedented experiment in duplitecture implies for the social, political, architectural, and commercial landscape of contemporary China. With her lively, authoritative narrative, the author shows us how, in subtle but important ways, these homes and public spaces shape the behavior of their residents as they reflect the achievements, dreams, and anxieties of those who inhabit them, as well as those of their developers and designers. From Chinese philosophical perspectives on copying to twenty-first-century market forces, Bosker details the factors giving rise to China's new breed of building. Her analysis draws on insights from the world's leading architects, critics, and city planners, and on interviews with the residents of these developments.

Diseases and Diagnoses Sander L. Gilman, 2017-09-08 *Diseases and Diagnoses* discusses why such social problems as addiction, sexually transmitted diseases, racial predisposition for illness, surgery, and beauty and electrotherapy—all of which concerned thinkers a hundred years ago—are reappearing at a staggering rate and in diverse national contexts. In the twentieth century, such problems were viewed as only historical concerns. Yet in the twenty-first century, we once again find ourselves confronting their implications. In this fascinating volume, Gilman looks at historical and contemporary debates about the stigma associated with biologically transmitted diseases. He shows that there is no indisputable way to measure when a disease or therapy will reappear or how it may be perceived at any given moment in time. Consequently, Gilman focuses on the socio-cultural and political implications that the reappearance of such diseases has had on contemporary society. His approach is to show how culture embedded in cultural objects both feeds and is fed by the claims of medical science, as for example the reappearance of race as a cultural as well as a medical category. If the twentieth century was the age of physics, in the latter part of the past century, and certainly in the twenty-first century, biological concerns are recapturing central stage. Achievements of the biological sciences are changing the public's sense of what constitutes cutting-edge science and medicine. None has captured the public imagination more effectively than the mapping of the human genome and the promise of genetic manipulation, which fuel what Gilman calls a second age of biology. Although not without controversy, the role of genetics appears to be key. Gilman puts contemporary debates in historical context, showing how they feed social and cultural concerns as well as medical possibilities.
