Committee on Post Office and Civil Service,1954 *Hearings* United States. Congress. House,1953 The Regulation of Peace River

Michael Church,2014-12-31 This book presents a comprehensive overview of the first longitudinal study of the downstream response of a major river to the establishment of a large hydropower facility and dams Peace River a northward flowing boreal river in northwestern Canada was dammed in 1967 and the book describes the morphological response of the 1200 km downstream channel and the response of riparian vegetation to the change in flow regime over the first forty years of regulated flows Beginning with a description of the effect of regulation on the flow and sediment regimes of the river the book proceeds to study changes in downstream channel geometry on the main stem on the lowermost course of tributaries and on the hydraulic geometry the overall morphology of the channel and riparian vegetation succession The river is subject to annual freeze up and break up so a chapter is devoted to the ice regime of the river A chapter compares the effects of two extraordinary post regulation flood events The penultimate chapter presents a prediction of the ultimate equilibrium form of

the regulated river based on rational regime theory An online database of all the main observations will provide invaluable material for advanced students of river hydraulics and geomorphology This book carefully brings together a range of studies that have been previously inaccessible providing a rare and comprehensive analysis of the effects of a big dam on a river a river that itself represents an example of the kind of system that is likely to receive considerable attention in the future from dam engineers and environmentalists An invaluable reference to river scientists hydroelectric power developers engineers and environmentalists Focus on a northward flowing boreal river a type that holds most of the remaining hydroelectric power potential in the Northern Hemisphere Exceptional separation of water and sediment sources permitting study of the isolated effect of manipulating one of the two major governing conditions of river processes and form Unique example of water regulation and both natural and engineered flood flows Detailed study of both morphological changes of the channel and of the riparian vegetation Online data supplement including major data tables and numerous maps Details of the main observations and provides material for problem study by advanced students of river hydraulics and geomorphology are provided

Tinclads in the Civil War Myron J. Smith, Jr., 2010-01-13 Once the Union Army gained control of the upper rivers of the Mississippi Valley during the first half of 1862 slow and heavy ironclads proved ineffective in patrolling the waters Hastily outfitted steamboats were covered with thin armor and pressed into duty These tinclads fought Confederate forces attacking from the riverbanks provided convoy for merchant steamers enforced revenue measures and offered tow dispatch and other fleet support services This history documents the service records and duties of these little known vessels of the Union fleet

[American Energy. Imperiled Coast](#) Jason P. Theriot, 2014-04-14 In the post World War II era Louisiana's coastal wetlands underwent an industrial transformation that placed the region at the center of America's energy producing corridor By the twenty first century the Louisiana Gulf Coast supplied nearly one third of America's oil and gas accounted for half of the country's refining capacity and contributed billions of dollars to the U S economy Today thousands of miles of pipelines and related infrastructure link the state's coast to oil and gas consumers nationwide During the course of this historic development however the dredging of pipeline canals accelerated coastal erosion Currently 80 percent of the United States wetland loss occurs on Louisiana's coast despite the fact that the state is home to only 40 percent of the nation's wetland acreage making evident the enormous unintended environmental cost associated with producing energy from the Gulf Coast In *American Energy Imperiled Coast* Jason P Theriot explores the tension between oil and gas development and the land loss crisis in Louisiana His book offers an engaging analysis of both the impressive albeit ecologically destructive engineering feats that characterized industrial growth in the region and the mounting environmental problems that threaten south Louisiana's communities culture and working coast As a historian and coastal Louisiana native Theriot explains how pipeline technology

enabled the expansion of oil and gas delivery examining previously unseen photographs and company records and traces the industry's far reaching environmental footprint in the wetlands Through detailed research presented in a lively and accessible narrative Theriot pieces together decades of political economic social and cultural undertakings that clashed in the 1980s and 1990s when local citizens scientists politicians environmental groups and oil and gas interests began fighting over the causes and consequences of coastal land loss The mission to restore coastal Louisiana ultimately collided with the perceived economic necessity of expanding offshore oil and gas development at the turn of the twenty first century Theriot's book bridges the gap between these competing objectives From the discovery of oil and gas below the marshes around coastal salt domes in the 1920s and 1930s to the emergence of environmental sciences and policy reforms in the 1970s to the vast repercussions of the BP Deepwater Horizon oil spill in 2010 American Energy Imperiled Coast ultimately reveals that the natural and man made forces responsible for rapid environmental change in Louisiana's wetlands over the past century can only be harnessed through collaboration between public and private entities

Pediatric and Neonatal Mechanical Ventilation Peter C. Rimensberger, 2014-11-12 Written by outstanding authorities from all over the world this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children infants and newborns In the early chapters developmental issues concerning the respiratory system are considered physiological and mechanical principles are introduced and airway management and conventional and alternative ventilation techniques are discussed Thereafter the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained with the emphasis on a practical step by step approach Respiratory monitoring and safety issues in ventilated patients are considered in detail and many other topics of interest to the bedside clinician are covered including the ethics of withdrawal of respiratory support and educational issues Throughout the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists
