Abominable Science! Daniel Loxton, Donald R. Prothero, 2013-08-06 A sharp analysis of the quest for unreal critters cryptids as they are called and the people who pursue them entertaining and thoroughly documented The Wall Street Journal Throughout our history humans have been captivated by mythic beasts and legendary creatures Tales of Bigfoot the Yeti and the Loch Ness monster are part of our collective experience Now comes a book from two dedicated investigators that explores and elucidates the fascinating world of cryptozoology Daniel Loxton and Donald R Prothero have written an entertaining educational and definitive text on cryptids presenting the arguments both for and against their existence and systematically challenging the pseudoscience that perpetuates their myths After examining the nature of science and pseudoscience and their relation to cryptozoology Loxton and Prothero take on Bigfoot the Yeti or Abominable Snowman and its cross cultural incarnations the Loch Ness monster and its highly publicized sightings the evolution of the Great Sea Serpent and Mokele Mbembe or the Congo dinosaur They conclude with an analysis of the psychology behind the persistent belief in paranormal phenomena identifying the major players in cryptozoology discussing the character of its subculture and considering the challenge it poses to clear and critical thinking in our increasingly complex world As valuable for its analysis of the hunted as it is for the light it shines on the still hopeful hunters Publishers Weekly Highly recommended for readers looking for scientific but accessible evaluations of the existence of five notable cryptids that have captured our imaginations Library Journal starred review The Lungfish, the Dodo & the Unicorn Willy Ley, 1948 Destined for the Stars Catherine L. Newell, 2019-06-05 Where did humanity get the idea that outer space is a frontier waiting to be explored Destined for the Stars unravels the popularization of the science of space exploration in America between 1944 and 1955 arguing that the success of the US space program was due not to technological or economic superiority but was sustained by a culture that had long believed it was called by God to settle new frontiers and prepare for the inevitable end of time and God's final judgment Religious forces Newell finds were in no small way responsible for the crescendo of support for and interest in space exploration in the early 1950s well before Project Mercury the United States first human spaceflight program began in 1959 In this remarkable history Newell explores the connection between the art of Chesley Bonestell the father of modern space art whose paintings drew inspiration from depictions of the American West and the popularity of that art in Cold War America Bonestell's working partnership with science writer and rocket expert Willy Ley and Ley and Bonestell's relationship with Wernher von Braun father of both the V 2 missile and the Saturn V rocket whose millennial conviction that God wanted humankind to leave Earth and explore other planets animated his life's work Together they inspired a technological and scientific faith that awoke a deep seated belief in a sense of divine destiny to reach the heavens The origins of their quest

Newell concludes had less to do with the Cold War strife commonly associated with the space race and everything to do with the religious culture that contributed to the invention of space as the final frontier *Pushing the Limits* Henry Petroski,2005-09-13 Here are two dozen tales in the grand adventure of engineering from the Henry Petroski who has been called America's poet laureate of technology *Pushing the Limits* celebrates some of the largest things we have created bridges dams buildings and provides a startling new vision of engineering's past its present and its future Along the way it highlights our greatest successes like London's Tower Bridge our most ambitious projects like China's Three Gorges Dam our most embarrassing moments like the wobbly Millennium Bridge in London and our greatest failures like the collapse of the twin towers on September 11 Throughout Petroski provides fascinating and provocative insights into the world of technology with his trademark erudition and enthusiasm for the subject Willy Ley Jared S.
