Radiological Imaging of the Ureter Francis Joffre, Philippe Otal, Michel Soulie, 2012-12-06 Owing to its central position in the retroperitoneal and pelvic cavity the ureter is rapidly affected by a variety of pathological processes Furthermore any disease involving the ureter can also have an effect on the kidneys For several decades the diagnosis of diseases affecting the ureter was based on intravenous excretory urography and techniques of direct opacification However the diagnostic strategy has been extensively modified by the advent of helical computed tomography and magnetic resonance imaging This book the first to focus specifically on ureteral imaging covers both the new and the traditional techniques Their use in the variety of scenarios involving ureteral disease is clearly elucidated with

[Selective Sentinel Lymphadenectomy for Human Solid Cancer](#) Stanley P. L. Leong,Yuko Kitagawa,Masaki Kitajima,2006-06-20 In human solid cancer the lymph node LN status is the most important prognostic indicator for the clinical outcome of patients Recent developments in the sentinel lymph node SLN concept and technology have resulted in the application of this revolutionary approach to define the first draining or SLN to which the cancer may have metastasized The underlying thesis in solid cancer biology is that metastasis generally starts in an orderly progression spreading through

the lymphatic channels to the SLN in the nearest LN basin. Thus the logical approach is to harvest that specific SLN for thorough analysis. Because a tumor-free SLN is usually associated with a negative residual LN basin, a negative SLN is an excellent indication that micrometastasis has not occurred in the regional LNs. When the SLN is involved, it is unknown whether or not metastasis is limited only to the SLN or if the disease has spread to the remainder of the nodal basin. For this reason, if a SLN is positive, a complete lymph node dissection is recommended. Therefore, selective sentinel lymphadenectomy (SSL) should be considered as a staging procedure so that patients with negative SLNs about 80% may be spared an extensive LN dissection. Malignant melanoma has been proven to be the most ideal tumor model to study the role of SLN. Subsequently, SSL has been applied to breast cancer, colon cancer, and other types of solid cancer. The multidisciplinary approach encompassing the surgeon, nuclear medicine physician, and pathologist is the key to such a successful procedure. Such a team can be formed readily with appropriate training. Beyond the technical aspects of harvesting the SLN, the implication of micrometastasis remains to be defined. Because the follow-up of melanoma and breast cancer patients after SSL is crucial, ongoing clinical trials are in progress to determine the biological and clinical significance of SLNs. Although the concept of SLN is viable in other types of cancer such as gynecological and gastrointestinal, the technical aspects of the procedure need to be perfected and verified. The most exciting possibility of SSL is that it will lead to early diagnosis of micrometastasis in regional LNs. Early diagnosis makes it useful as a clinical staging procedure and opens up new opportunities to study micrometastasis and its evolution within the SLNs. Examining the multifaceted aspects of micrometastasis such as differentiation of different clones with respect to the primary tumor, acquisition of adhesion molecules, and host interaction with the microscopic tumor will shed new light on the biology of early metastasis. New molecular and genetic tools may be used to dissect the mechanisms of lymphatic and hematogenous routes of metastasis. If such mechanisms can be understood, new therapeutic advances may be developed to prevent the process of micrometastasis. Rather than targeting larger tumor burdens such as Stage IV disease, targeted adjuvant clinical trials can be developed for high-risk patients following definitive surgical resection. SSL is a standard staging procedure for patients with melanoma and is rapidly evolving into a standard procedure for breast cancer as well.

Vascular Surgery Rodney A. White, MD, Larry H. Hollier, 2008-04-15. This second edition of a very successful vascular surgery text was developed in order to address significant changes that have occurred in contemporary vascular surgery and to highlight new information that has developed regarding vascular imaging, interventional, and endovascular procedures. The overall length of the text is slightly shorter than the first edition, with relevant core chapters being retained to emphasize the basic science nature of the text, with approximately 60% of the material undergoing major revisions or being new chapters. The significant change from the first text is an emphasis on vascular pathology and physiology that is relevant to current practice, including information that is currently included on the vascular board examinations. A new emphasis on endovascular therapies has been added by including five chapters on

endovascular techniques and an additional section with six chapters comparing conventional vascular reconstruction to endovascular methods. These new chapters address the most important issue in contemporary vascular surgery, i.e. the role of endovascular methods in treating vascular lesions and the impact that this has on training and credentialing. A unique aspect of this book differentiating it from other texts is a comparison of conventional methods with the endovascular techniques. Overall, the text provides a comprehensive perspective of contemporary vascular surgery and future perspectives. The authors are preeminent in the field and are most capable for addressing the assigned topics with the goals being to provide an updated and forward-looking text that accommodates the needs of practicing and training vascular surgeons.

Atlas of Lymphoscintigraphy and Sentinel Node Mapping Giuliano Mariani, Sergi Vidal-Sicart, Renato A. Valdés Olmos, 2020-07-29. The main goal of the second edition of this book is to update the content on the rapidly growing field of lymphoscintigraphy, a radionuclide-based imaging procedure that provides information on the functional status of the lymphatic system. Although the technique was originally introduced to identify the cause of peripheral edema, i.e. blockage of the venous or lymphatic circulation, more recent and widespread applications include radioguided biopsy of the sentinel lymph node in patients with solid cancers. This procedure is crucial for the adequate planning of oncologic surgery in a growing number of cancers, most notably breast cancer, cutaneous melanoma, head and neck cancers, penile cancer, and cervical cancer. The book focuses on the latest advances in lymphoscintigraphy techniques, including both novel tracers recently approved for clinical use, especially in the field of sentinel lymph node mapping, and the expanding role of hybrid imaging with SPECT/CT and in sentinel node detection using hybrid tracers radiolabeled and fluorescent for dual signature guidance. Each chapter addresses the clinical application of lymphoscintigraphy in different anatomic areas or disease conditions. After an introductory section concerning the pathophysiology of the specific site disease, the clinical relevance and impact of lymphoscintigraphy is demonstrated by a collection of richly illustrated teaching cases describing the lymphoscintigraphic patterns most commonly observed, as well as anatomic variants and technical pitfalls. Emphasis is placed on tomographic multimodality imaging. The book gathers contributions by experts in nuclear oncology who have revised their chapters by updating the didactic material and adding clinical cases. Regarding sentinel lymph node biopsy, in particular, a major distinction of this text is the incorporation of the staging guidelines of the American Joint Committee on Cancer 8th edition into the didactic material.

Vascular and Endovascular Surgery E-Book Jonathan D Beard, Peter A. Gaines, Ian Loftus, 2013-06-20. Vascular and Endovascular Surgery meets the needs of surgeons in higher training and practising consultants for a contemporary and evidence-based account of this subspecialty that is relevant to their general surgical practice. It is a practical reference source incorporating the most current information on recent developments, management issues, and operative procedures. The text is thoroughly referenced and supported by evidence-based recommendations wherever possible, distinguishing between strong evidence to support a conclusion and evidence suggesting that a recommendation can be reached on the balance of probabilities. This is a

title in the Companion to Specialist Surgical Practice series whose eight volumes are an established and highly regarded source of information for the specialist general surgeon The Companion to Specialist Surgical Practice series provides a current and concise summary of the key topics within each major surgical sub specialty Each volume highlights evidence based practice both in the text and within the extensive list of references at the end of every chapter An expanded authorship team across the series includes additional European and World experts with an increased emphasis on global practice The contents of the series have been extensively revised in line with recently published evidence The revision of the content reflects the continued move towards non invasive imaging medical therapy and endovascular techniques culminating in a new chapter on Future Developments Many of the chapters reflect the collaborative nature of a modern vascular service and are co authored by a vascular surgeon and a vascular radiologist The authorship team has been expanded with input from vascular nursing and rehabilitation experts

Clinical Evaluation of Antitumor Therapy Franco M. Muggia, Marcel Rozenzweig, 2012-12-06 The methodology of drug development has been the subject of extensive discussion by a relatively small group of individuals in industry and government who have been intimately concerned with the identification and study of new anticancer drugs The Chemotherapy Program of the National Cancer Institute has represented the major focus of initial efforts in drug development as summarized in the historical perspective presented in chapter 1 and its references It is no coincidence that the Chemotherapy Program was the origin of the Division of Cancer Treatment a government entity that has had a pivotal role in the growth of clinical oncology In an analogous fashion this book presents the methodology employed in the clinical study of anticancer drugs within the broad context of cancer treatment The research orientation promulgated in the study of new drugs is a central theme in most oncologists approach to the clinical problem of cancer Therefore we hope that this book will introduce readers to treatment research in clinical oncology For the oncologist the clinical evaluation of antitumor therapy is both part of the day to day management of specific patients and the critical consideration of developing therapeutic alternatives For physicians in other fields of medicine it is important to acquaint themselves with the basic tools of the oncologist For people without medical training including patients who might be interested in treatment research many of the chapters may be overly technical
