Evapotranspiration Stavros Alexandris, 2013-04-30 Evapotranspiration An Overview contains recent advances in the physics of evaporation and transpiration from a typical experimental site to large scale areas It incorporates many years of authors experience with the latest research on the methods and the models used worldwide engaging advanced technology and modern instrumentation The reader benefits from the in depth analysis and the diverse sites and settings where the models applications and methods are tested Weather conditions soil moisture geology climatic systems are examined for their role and influence on the theoretical and actual water demand by the atmosphere in the earth s ecosystem This book not only provides students and scientists with the information to improve the procedures for estimating evapotranspiration but will also help them to manage and evaluate the observed data

Soil Physical Methods for Estimating Recharge - Part 3 W Bond, 1998-03-01 Measurements in and just below the plant root zone using principles of soil physics can be used to estimate recharge This booklet describes the Zero Flux Plane Method Methods Based on Darcy s law and Lysimetry for making such estimates The work presents the basic concepts of soil water physics that will be referred to in this and other booklets in the series Another method the Soil Water Flux Meter is discussed briefly but as this is not sufficiently well developed for routine use readers are

referred elsewhere for full details All these methods require that consideration be given to interpolation over time and spatial extrapolation or averaging A brief discussion of this is given *Handbook of Soil Science* Malcolm E. Sumner,1999-08-31 The Handbook of Soil Science provides a resource rich in data that gives professional soil scientists agronomists engineers ecologists biologists naturalists and their students a handy reference about the discipline of soil science This handbook serves professionals seeking specific factual reference information Each subsection includes a description of concepts and theories definitions approaches methodologies and procedures tabular data figures and extensive references **Soil Physics Companion** A.W. Warrick,2001-12-28 An authoritative reference on soil physics Soil Physics Companion is lavishly illustrated with graphs charts line drawings and equations The book provides a valuable source of material and reference for most contemporary topics of soil physics and the vadose zone arguably the most comprehensive volume available In addition to being a reliable Management of Drip/Trickle or Micro Irrigation Megh R. Goyal,2012-07-19 This important book the only complete one stop manual on microirrigation worldwide offers knowledge and techniques necessary to develop and manage a drip trickle or micro irrigation system The simplicity of the contents facilitates a technician to develop an effective micro irrigation system Management of Drip Trickle or Micro Irrigation includes the basic considerations relating to soil water plant interactions with topics such as methods for soil moisture measurement evapotranspiration irrigation systems tensiometer use and installation principles of drip micro trickle irrigation filtration systems automation chlorination service and maintenance design of drip irrigation and lateral lines the evaluation of uniformity of application and an economical analysis for selecting irrigation technology **Understanding Water in a Dry Environment** Ian Simmers,2003-01-01 In order to provide water security in the twenty first century there is universal agreement that a continuation of current policies and extrapolation of trends is not an option Also clear is that from both water supply and development perspectives the world s arid and semi arid regions are those currently and potentially experiencing the highest water stresses One third of the world s land surface is classified as arid or semi arid and about half of all countries are directly affected in some way by problems of aridity The hydrology of arid and semi arid areas is also known to be substantially different from that in more humid regions It is therefore essential that investigation methods appropriate to the former are developed and applied and that strategies for arid and semi arid region water resources development recognise the principal characteristics of in situ hydrological processes **Environmental Planning Manual for Salinity Management in Irrigated Agriculture** Gaylord V. Pereira, R.A. Feddes, J.R. Gilley, B. Lesaffre, 2013-03-09 Irrigated agriculture and the use of water resources in agriculture face the challenges of sustainable development Research has advanced our knowledge of water use by crops soil water solutes interactions and the engineering and managerial tools needed to mobilize convey distribute control and apply water for agricultural production However the achievements booked in user practice have revealed the need for new developments in the areas of resource conservation control of environmental and health impacts modernisation of technologies and management economic viability and the social acceptance of changes The contributions to Sustainability of Irrigated Agriculture cover most of the relevant disciplines Besides its multidisciplinary nature the different origins experience backgrounds and practices of the authors provide a wide in depth analysis of the various aspects of water resource utilization in agriculture The papers review scientific technical and managerial aspects highlighting the main problems issues and future developments The book covers the different aspects of sustainability including environmental technical economic institutional and social ones Advances in irrigation science and engineering are dealt with both on and off farm Special attention is paid to the different components of water quality management to the transfer of technology and to capacity building **ASCE Combined Index** American Society of Civil Engineers, 1991 Indexes materials appearing in the Society's Journals Transactions Manuals and reports Special publications and Civil engineering *Sustainable Irrigation Management, Technologies and Policies* Giulio Lorenzini, C. A. Brebbia, 2006 Fresh water is becoming an ever increasingly precious commodity control of which could lead in the near future to the type of political instability now associated with energy shortages This book addresses the different aspects of irrigation including not only the management of water resources and scientific and technical aspects but also matters related to policy and economics researchers in academia and industry as well as professional practitioners and policy makers Bringing together papers from the First International Conference on Sustainable Irrigation Management Technologies and Policies the book covers topics such as Irrigation Controls Irrigation Modelling Irrigation Systems and Planning Irrigation Management **Geotitles**, 1991 **Estimation of Evapotranspiration Rates in Irrigated Lands of the Fergana Valley using Stable Isotopes** Gulomjon Umirzakov, 2016-03-30 Agriculture in Uzbekistan critically depends on water resources availability therefore crop production especially of cotton and winter wheat is restricted mainly to irrigated areas As a result of water shortage under climate change land degradation issues in the region worsened and water use efficiency has considerably decreased over the decades Hence it is essential to investigate water balance parameters in irrigated lands Environmental isotopes have been

widely applied in hydrological investigations particularly estimation of evapotranspiration rate one of the main components of the water balance in irrigated lands This study aims to estimate evapotranspiration rates in cotton fields by applying water stable isotopes 2H and 18O The study is based on the field experiments conducted during the vegetation periods 2010 and 2011 in the Fergana Region of Uzbekistan Soil for isotope analysis were sampled in a sandy field sandy loam 1 field rich with gypsum and sandy loam 2 field without gypsum The soil water from the samples was extracted by the cryogenic extraction method 2H and 18O ratios of extracted water were determined using the laser spectroscopy method Evapotranspiration rates were estimated with the isotope mass balance model Besides evapotranspiration estimation this study examines the variability and characteristics of stable isotope signatures of different water sources in the study region and analyzes water extraction processes from different soil types and temporal changes of isotope signatures through the depth in irrigated cotton fields
