Machine Intelligence And Knowledge Engineering For Robotic Applications:

Machine Intelligence and Knowledge Engineering for Robotic Applications Andrew K.C. Wong,Alan Pugh,2012-12-06 This book is the outcome of the NATO Advanced Research Workshop on Machine Intelligence and Knowledge Engineering for Robotic Applications held at Maratea Italy in May 1986 Attendance of the workshop was by invitation only Most of the participants and speakers are recognized leaders in the field representing industry government and academic c0mrnunity worldwide The focus of the workshop was to review the recent advances of machine intelligence and knowledge engineering for robotic appli cations It covers five main areas of interest They are grouped into five sections 1 Robot Vision 2 Knowledge Representation and Image Understanding 3 Robot Control and Inference Systems 4 Task Planning and Expert Systems 5 Software Hardware Systems Also included in this book are a paper from the Poster Session and a brief report of the panel discussion on the Future Direction in Knowledge Based Robotics Section I of this book consists of four papers It begins with a review of the basic concepts of computer vision with emphasis on techniques specific for robot vision systems The next paper pre sents a comprehensive 3 D vision system for robotic application **Machine Intelligence and Knowledge Engineering** NATO Advanced Research Workshop on Machine,1987 Intelligent robotics Mark H. Lee,2013-03-09 An industrial robot routinely carrying out an assembly or welding task is an impressive sight More important when operated within its design conditions it is a reliable production machine which depending on the manufacturing process being automated is relatively quick to bring into operation and can often repay its capital cost within a year or two Yet first impressions can be deceptive if the workpieces deviate somewhat in size or position or worse if a gripper slips or a feeder jams the whole system may halt and look very unimpressive indeed This is mainly because the sum total of the system s knowledge is simply a list of a few variables describing a sequence of positions in space the means of moving from one to the next how to react to a few input signals and how to give a few output commands to associated machines The acquisition orderly retention and effective use of knowledge are the crucial missing techniques whose inclusion over the coming years will transform today s industrial robot into a truly robotic system embodying the intelligent connection of perception to action The use of computers to implement these techniques is the domain of Artificial Intelligence AI machine intelligence Evidently it is an essential ingredient in the future development of robotics yet the relationship between AI practitioners and robotics engineers has been an uneasy one ever since the two disciplines were born **Expert Systems and Robotics** Timothy Jordanides,Bruce Torby,2012-12-06 The areas of intelligent machines or robotic systems is of enormous technological and economic interest as competition in productivity intensifies This volume gives the proceedings of the 1990 Advanced Study Institute on Expert Systems and Robotics It presents research work already accomplished in the analytical theory of intelligent machines work in progress and of current interest and some specific examples for further research The papers in the volume range from the most theoretical to some descriptions of very practical working robots The papers are

organized into sections on vision and image analysis robotic sensory systems software hardware and system simulation robot control applications and reports of group meetings **Robots and Biological Systems: Towards a New Bionics?** Paolo Dario,Giulio Sandini,Patrick Aebischer,2012-12-06 Bionics evolved in the 1960s as a framework to pursue the development of artificial systems based on the study of biological systems Numerous disciplines and technologies including artificial intelligence and learningdevices information processing systems architecture and control perception sensory mechanisms and bioenergetics contributed to bionics research This volume is based on a NATO Advanced Research Workshop within the Special Programme on Sensory Systems for Robotic Control held in Il Ciocco Italy in June 1989 A consensus emerged at the workshop and is reflected in the book on the value of learning from nature in order to derive guidelines for the design of intelligent machines which operate in unstructured environments The papers in the book are grouped into seven chapters vision and dynamic systems hands and tactile perception locomotion intelligent motor control design technologies interfacing robots to nervous systems and robot societies and self organization Expert Systems and Related Topics Marlene A. Palmer,1990-01-01 This comprehensive reference to all areas of expert systems and applications plus advanced related topics lets you spend your time reading expert systems literature rather than searching for it It gives you a source of historical perspectives and outlooks on the future of the field Whether you are a manager a developer or an end user or researcher Expert Systems and Related Topics Selected Bibliography Guide to Information Sources puts all the sources of expert systems literature at your fingertips **Speechreading by Humans and Machines** David G. Stork,Marcus E. Hennecke,2013-11-11 This book is one outcome of the NATO Advanced Studies Institute ASI Workshop Speechreading by Man and Machine held at the Chateau de Bonas Castera Verduzan near Auch France from August 28 to Septem ber 8 1995 the first interdisciplinary meeting devoted the subject of speechreading lipreading The forty five attendees from twelve countries covered the gamut of speechreading research from brain scans of humans processing bi modal stimuli to psychophysical experiments and illusions to statistics of comprehension by the normal and deaf communities to models of human perception to computer vision and learning algorithms and hardware for automated speechreading machines The first week focussed on speechreading by humans the second week by machines a general organization that is preserved in this volume After the in evitable difficulties in clarifying language and terminology across disciplines as diverse as human neurophysiology audiology psychology electrical en gineering mathematics and computer science the participants engaged in lively discussion and debate We think it is fair to say that there was an atmosphere of excitement and optimism for a field that is both fascinating and potentially lucrative Of the many general results that can be taken from the workshop two of the key ones are these The ways in which humans employ visual image for speech recogni tion are manifold and complex and depend upon the talker perceiver pair severity and age of onset of any hearing loss whether the topic of conversation is known or unknown the level of noise and so forth **Intelligent Seam Tracking for Robotic Welding** Nitin R.

Nayak,Asok Ray,2013-03-07 Intelligent Seam Tracking for Robotic Welding is part of the Advances in Industrial Control series edited by Professor M J Grimble and Dr M A Johnson of the Industrial Control Unit University of Strathclyde This publication discusses in depth the development of a seam tracking system for robotic welding Various topics are covered including the theory of seam tracking details of the sub systems comprising the intelligent seam tracker and the operation of the seam tracking system with coordinated interaction amongst the various sub systems The sources of various seam tracking errors and existing seam tracking systems operating in both structured and unstructured welding environments are also addressed The work reported builds upon the research conducted during the course of the project ARTIST Adaptive RealTime Intelligent Seam Tracker at the Applied Research Laboratory of the Pennsylvania State University Although the book is presented in the context of seam tracking issues related to systems integration are general in nature and relate to other applications as well **Intelligent Learning Environments and Knowledge Acquisition in Physics** Andree Tiberghien,Heinz Mandl,2012-12-06 The NATO workshop Knowledge acquisition in the domain of physics and intelligent learning environments was held in Lyon France July 8 12 1990 A total of 31 researchers from Europe France Germany Greece Italy Portugal and the U K the U S A and Japan worked together This proceedings volume contains most of the contributions to the workshop The papers show clearly the main directions of research in intelligent learning environments They display a variety of points of view depending on the researcher s own background even when a single domain of teaching namely physics is considered We acknowledge the assistance of Michael Baker who was responsible for reviewing the English of the contributions February 1992 Andree TIberghien Heinz Mandl Table of Contents Introduction 1 1 Teaching Situations and Physics Knowledge Introductory University Courses and Open Environment Approaches The Computer as a Multi role Mediator in Teaching Learning Physics 5 E Balzano P Guidoni M Moretti E Sassi G Sgueglia Practical Work Aid Knowledge Representation in a Model Based AI System 21 J Courtois Simultaneous Processing of Different Problem Aspects in Expert Problem Solving An Analysis in the Domain of Physics on the Basis of Formal Theories of Commonsense Knowledge 35 A Hron Modelis An Artificial Intelligence System Which Models Thermodynamics Textbook Problems 47 G Tisseau 2 Different Approaches to Student Modelling Steps Towards the Formalisation of a Psycho logic of Motion 65 J Bliss J

Sensor-Based Robots: Algorithms and Architectures C.S.George Lee,2012-12-06 Most industrial robots today have little or no sensory capability Feedback is limited to information about joint positions combined with a few interlock and timing signals These robots can function only in an environment where the objects to be manipulated are precisely located in the proper position for the robot to grasp i e in a structured environment For many present industrial applications this level of performance has been adequate With the increasing demand for high performance sensor based robot manipulators in assembly tasks meeting this demand and challenge can only be achieved through the consideration of 1 efficient acquisition and processing of intemaVextemal sensory information 2 utilization and integration of sensory information from various

sensors tactile force and vision to acquire knowledge in a changing environment 3 exploitation of inherent robotic parallel algorithms and efficient VLSI architectures for robotic computations and finally 4 system integration into a working and functioning robotic system This is the intent of the Workshop on Sensor Based Robots Algorithms and Architectures to study the fundamental research issues and problems associated with sensor based robot manipulators and to propose approaches and solutions from various viewpoints in improving present day robot manipula tors in the areas of sensor fusion and integration sensory information processing and parallel algorithms and architectures for robotic computations *CAD Based Programming for Sensory Robots* Bahram Ravani,2012-12-06 This book contains 26 papers presented at the NATO Advanced Research Workshop on CAD Based Programming for Sensory Robots held in IL CIOCCa Italy July 4 6 1988 CAD based robot programming is considered to be the process where CAD Computer Based models are used to develop robot programs If the program is generated at least partially by a programmer interacting for example with a computer graph i c d sp i 1 ay of the robot and its workce 11 env ironment the process is referred to as graphical off line programming On the other hand if the robot program is generated automatically for example by a computer then the process is referred to as automatic robot programmi ng The key element here is the use of CAD models both for interact i ve and automat i c generat i on of robot programs CAD based programmi ng therefore bri ngs together computer based model i ng and robot programmi ng and as such cuts across several discipl ines including geometric model ing robot programming kinematic and dynamic modeling artificial intelligence sensory monitoring and so on Sensors and Sensory Systems for Advanced Robots Paolo Dario,Centro E.
