From Fingers to Digits Margaret A. Boden, Ernest A. Edmonds, 2019-07-16. Essays on computer art and its relation to more traditional art by a pioneering practitioner and a philosopher of artificial intelligence. In *From Fingers to Digits*, a practicing artist and a philosopher examine computer art and how it has been both accepted and rejected by the mainstream art world. In a series of essays, Margaret Boden, a philosopher and expert in artificial intelligence, and Ernest Edmonds, a pioneering and internationally recognized computer artist, grapple with key questions about the aesthetics of computer art. Other modern technologies, photography and film, have been accepted by critics as ways of doing art. Does the use of computers compromise computer art's aesthetic credentials in ways that the use of cameras does not? Is writing a computer program equivalent to painting with a brush? Essays by Boden identify types of computer art, describe the study of creativity in AI, and explore links between computer art and traditional views in philosophical aesthetics. Essays by Edmonds offer a practitioner's perspective, considering among other things how the experience of creating computer art compares to that of traditional art making. Finally, the book presents interviews in which contemporary computer artists offer a wide range of comments on the issues raised in Boden's and Edmonds's essays.

Social Media Archeology and Poetics Judy Malloy, 2025-05-27. First person accounts by pioneers in the field, classic essays, and new scholarship document the collaborative and creative practices of early social media. Focusing on early social media in the arts and humanities and on the core role of creative computer scientists, artists, and scholars in shaping the pre-Web social media landscape, *Social Media Archeology and Poetics* documents social media lineage beginning in the 1970s with collaborative ARPANET research, Community Memory, PLATO, Minitel, and ARTEX, and continuing into the 1980s and beyond with the Electronic Caf, Art Com, Electronic Network Arts, Wire, The THING, and many more. With first person accounts from pioneers in the field as well as papers by artists, scholars, and curators, *Social Media Archeology and Poetics* documents how these platforms were vital components of early social networking and important in the development of new media and electronic literature. It describes platforms that allowed artists and musicians to share and publish their work, community networking, diversity, and the creation of footholds for the arts and humanities online. And it invites comparisons of social media in the past and present, asking: What can we learn from early social media that will inspire us to envision a greater cultural presence on contemporary social media?
