Missile And Space Race:

The Missile and Space Race Alan Levine, 1994-07-30 Here is a history of the development of military missiles and space travel from World War II to the American visits to the Moon in 1969 1972 It stresses the relationship between the early stages of space exploration and the arms race and that a dual path led to space flight One was the development of unmanned long range war rockets the other less often noted was the rocket powered research plane The first path led through the intercontinental ballistic missile to the first artificial satellites and space capsule the latter more uniquely American through the X series and Skyrocket rocket planes to the X 15 and ultimately to the Space Shuttle The early part of the book focuses on the Soviet American race to develop the ICBM in the 1950s and the first satellites with particular attention paid to the events and reactions that followed the flight of Sputnik I in 1957 and the subsequent missile gap era *The Development of U.S. Missiles During the Space Race with the U.S.S.R.* Robert Tata, 2011-03-24 This book describes some of the more interesting aspects of life at Cape Canaveral and the U S missile systems that were developed there through the eyes of a young engineer fresh out of college who was indoctrinated into the profession during one of the most turbulent times in U S history It briefly describes rocket engines rocket engine propellants and the various missile systems developed during the Cold War with the U S S R It goes behind the scenes in discussing problems experienced during an actual countdown operation with the Atlas Missile It concludes with a candid narrative by the author of his sometimes serious sometimes humorous experiences at Cape Canaveral that took him close to some of the people that made U S history in space flight and space exploration **Western Aviation, Missiles, and Space** , 1963 After Sputnik Alan J. Levine, 2017-12-12 On October 4 1957 in the midst of the Cold War the Soviet Union launched Sputnik I the first artificial earth satellite For the West and especially the United States it was a shattering blow to national morale and pride It led to a deep seated fear that the Soviet Union would surpass the United States in both technology and power and that even nuclear war might be near After Sputnik shows that the late 1950s were not an era of complacency and smugness but were some of the most anxious years in American history The Cold War was by no means a time of peace It was an era of a different kind of battle one that took place in negotiations and in the internal affairs of many countries but not always on the battlefield While many choose to remember President Eisenhower as a near pacifist his actions in Lebanon the Taiwan Straits crisis Berlin and elsewhere proved otherwise Seconded by his able secretary of state John Foster Dulles he steered America through some of the most difficult parts of the Cold War not always succeeding but preventing disaster The Middle East and Berlin crises the Indonesian Civil War Fidel Castro's rise to power and other events are all bluntly discussed in the light of Western and other illusions and delusions In this engaging history Alan J Levine delves deeply into this often misrepresented period of history and provides new insight into one of the most formative decades in American history **The development of ballistic missiles in the United States Air Force 1945-1960** , **Missiles, Space, and Other Major Defense Matters** United

States. Congress. Senate. Committee on Armed Services,1960 Missiles, Space and Other Major Defense Matters United States. Congress. Senate. Preparedness Investigating Subcommittee of the Armed Services Committee in conjunction with the Aeronautical and Space Science Committee,1960 **Missiles, Rockets, and Space Vehicles, 1959-1960** United States. Department of the Army,1960 The Bomb and America's Missile Age Christopher Gainor,2018-10-15 How nuclear weapons helped drive the United States into the missile age The intercontinental ballistic missile ICBM designed to quickly deliver thermonuclear weapons to distant targets was the central weapons system of the Cold War ICBMs also carried the first astronauts and cosmonauts into orbit More than a generation later we are still living with the political technological and scientific effects of the space race while nuclear armed ICBMs remain on alert and in the headlines around the world In The Bomb and America's Missile Age Christopher Gainor explores the US Air Force's USAF decision in March 1954 to build the Atlas America's first ICBM Beginning with the story of the guided missiles that were created before and during World War II Gainor describes how the early Soviet and American rocket programs evolved over the course of the following decade He argues that the USAF was wrongly criticized for unduly delaying the start of its ICBM program endangering national security and causing America embarrassment when a Soviet ICBM successfully put Sputnik into orbit ahead of any American satellite Shedding fresh light on the roots of America's space program and the development of US strategic forces The Bomb and America's Missile Age uses evidence uncovered in the past few decades to set the creation of the Atlas ICBM in its true context not only in the America of the postwar years but also in comparison with the real story of the Soviet missiles that propelled the space race and the Cold War Aimed at readers interested in the history of the Cold War and of space exploration the book makes a major contribution to the history of rocket development and the nuclear age **The Development of Ballistic Missiles in the United States Air Force, 1945-1960** Jacob Neufeld,1990 Following World War II the onset of nuclear weapons long range jet bombers and ballistic missiles radically changed American foreign policy and military strategy The United States Air Force led by men of far sighted vision and uncommon dedication accepted the challenge of organizing and leading a massive research and development effort to build ballistic missiles In the quarter of the century since these weapons have constituted one of the three legs of the strategic triad the basis of America's strategy of deterring nuclear war yet they have received less attention from the public and within the Air Force than the more glamorous manned bombers of the Strategic Air Command or the missile launching submarines of the U S Navy This volume attempts to correct the imbalance by telling the story of development of Air Force ballistic Missiles It concentrates on the first generation of ballistic missiles the intercontinental Atlas and Titan and the intermediate range Thor Although the effort to develop rockets has a longer history than commonly assumed the modern history spans the relatively short era from 1945 to 1960 During this brief interval missiles advanced from drawing board to alert status where the next generation now remains poised to deter war **Missiles, Space, and Other Major Defense Matters** ,1960 Air University Periodical Index ,
