*Higher Education in the United States* James J. F. Forest, Kevin Kinser, 2002-06-21 Surveys the changing landscape of American higher education from academic freedom to virtual universities from campus crime to Pell Grants from the Student Privacy Act to student diversity In the years following World War II college and university enrollment doubled students revolted faculty unionized and community colleges evolved Tuition and technology soared as did the number of first generation minority and women students These changes radically transformed the American system of postsecondary education Today that system is in trouble Its aging professoriate prepares for retirement but low academic salaries can no longer attract the best minds to replace them A flood of corporate dollars funds commercial research but money for basic research the seedbed of American scientific preeminence has dried

up Colleges and universities also face heated competition with for profit education providers for students faculty and external financial support along with the costs of providing remedial education to growing numbers of students who are unprepared for postsecondary education Higher Education in the United States provides a comprehensive analysis of these issues and others that scholars and practitioners of higher education study discuss and grapple with on a daily basis Towards a CSCW Framework for Scientific Cooperation in Europe Hannes P. Lubich,1995-01-26 This monograph presents the still young but already large and very active interdisciplinary realm of computer supported cooperative work CSCW in a systematic and well balanced way Besides technical progress also the cultural social legal psychological and economic aspects of CSCW are discussed The book makes accessible a wealth of information and culminates in the development and detailed discussion of a Collaboratory suitable to fulfil the needs of scientific cooperation in Europe The book addresses CSCW research and development professionals as well as the general scientist interested in CSCW based scientific cooperation The bibliography with its more than 600 entries and the subject index are particularly comprehensive and helpful *Cooperative Computer-Aided Authoring and Learning* Max Mühlhäuser,2012-12-06 Cooperative Computer Aided Authoring and Learning A Systems Approach describes in detail a practical system for computer assisted authoring and learning Drawing from the experiences gained during the Nestor project jointly run between the Universities of Karlsruhe Kaiserslautern and Freiburg and the Digital Equipment Corp Center for Research and Advanced Development the book presents a concrete example of new concepts in the domain of computer aided authoring and learning The conceptual foundation is laid by a reference architecture for an integrated environment for authoring and learning This overall architecture represents the nucleus shell and common denominator for the R Authoring learning as the central topic Laboratory as the term which evoked the most suitable association with the envisioned authoring learning environment Within this framework the book covers four major topics which denote the most important technical domains namely The system kernel based on object orientation and hypermedia Distributed multimedia support Cooperation support and Reusable instructional design support Cooperative Computer Aided Authoring and Learning A Systems Approach is a major contribution to the emerging field of collaborative computing and is essential reading for researchers and practitioners alike Its pedagogic flavor also makes it suitable for use as a text for a course on the subject *Encyclopedia of Information Assurance - 4 Volume Set (Print)* Rebecca Herold,Marcus K. Vijay Kumar,2010-09-24 Experts discuss the potential for open education tools resources and knowledge to transform the economics and ecology of education Given the abundance of open education initiatives that aim to make educational assets freely available online the time seems ripe to explore the potential of open education to transform the economics and ecology of education Despite the diversity of tools and resources already available from well packaged course materials to simple games for students self learners faculty and educational institutions we have yet to take full advantage of shared knowledge about how these are being used what local innovations are emerging and how to learn from and build on the experiences of others Opening Up Education argues that we must develop not only the technical capability but also the intellectual capacity for transforming tacit pedagogical knowledge into commonly usable and visible knowledge by providing incentives for faculty to use and contribute to open education goods and by looking beyond institutional boundaries to connect a variety of settings and open source entrepreneurs These essays by leaders in open education describe successes challenges and opportunities they have found in a range of open education initiatives They approach from both macro and micro perspectives the central question of how open education tools resources and knowledge can improve the quality of education The contributors from leading foundations academic institutions associations and projects discuss the strategic underpinnings of their efforts first in terms of technology then content and finally knowledge They also address the impact of their projects and how close they come to achieving a vision of sustainable transformative educational opportunities that amounts to much more than pervasive technology Through the support of the Carnegie Foundation for the Advancement of Teaching an electronic version of this book is openly available under a Creative Commons license at The MIT Press Web site <http://mitpress.mit.edu> Contributors Richard Baraniuk Randy Bass Trent Batson Dan Bernstein John Seely Brown Barbara Cambridge Tom Carey Catherine Casserly Bernadine Chuck Fong Ira Fuchs Richard Gale Mia Garlick Gerard Hanley Diane Harley Mary Huber Pat Hutchings Toru Iiyoshi David Kahle M S Vijay Kumar Andy Lane Diana Laurillard Stuart Lee Steve Lerman Marilyn Lombardi Phil Long Clifford Lynch Christopher Mackie Anne Margulies Owen McGrath Flora McMartin Shigeru Miyagawa Diana Oblinger Neeru Paharia Cheryl Richardson Marshall Smith Candace Thille Edward Walker David

Wiley     **The Strategic Management of E-Learning Support** Franziska Zellweger Moser,     **Environmental Information Management And Analysis** W K Michener, J W Brunt, S G Stafford, 1994-08-08 Most environmental studies are based upon data collected at fine spatial scales plots sediments cores etc Furthermore temporal scales of these studies have been relatively short days weeks months and few studies have exceeded three years duration the typical funding cycle Despite this history environmental scientists are now being called upon to extrapolate findings from plot level studies to broader spatial scales and from short term studies to longer temporal scales up to decades for questions related to long term processes such as global warming and the rise in sea level The complex questions being addressed internationally require that scientists take advantage of new technologies including remote sensing geographic information systems GIS and powerful climatic and environmental simulation models As more environmental scientists begin to work at these broader spatial and temporal scales and to utilize many of the newer technologies they are recognising a whole new class of problems This book aims to address the most pertinent issues and includes a comprehensive review of selected topics case studies and theoretical discussions divided into seven sections each preceded by a brief introduction     *OOIS' 95* John Murphy, Brian Stone, 2012-12-06 *OOIS 95 Object Oriented Information Systems 95* contains contributions from leading researchers and practitioners working on object oriented technology and its application in information systems design and development The book has a strong practical focus and contains much technical insight of particular relevance to professionals working in the field The papers cover two main areas of the field academic research trends into object oriented concepts and principles and state of the art applications in industry Among the specific topics covered are modelling knowledgebases software development interface design object databases distributed databases and emerging object technologies All those working in the field of information technology will find the book a useful source of reference     *Designing Environments for Constructive Learning* Thomas M. Duffy, Joost Lowyck, David H. Jonassen, 2012-12-06 The idea for this book grew out of a NATO Advanced Research Workshop held at the Catholic University at Leuven Belgium We are grateful to NATO for support in conducting this workshop and for support in the preparation of this book We are particularly grateful for their emphasis on designing the workshop to build collegiality They suggested that we hold the meeting in a small town and that we organize evening activities to keep the group together and to promote informal and extended discussions What sage advice The excitement grew over the three days as we shared understandings and enriched our perspectives Indeed there was even a proclaimed near conversion to a constructivist perspective from one colleague trained in traditional instructional design methods While we report this as a bit of a humorous anecdote it most clearly reflects the sense of excitement that developed We would also like to thank the staff at the Catholic University for their great support during the workshop Their efforts and their good cheer were important components in the success of the meeting In particular we would like to thank Jan Elen Catherine Vermunicht and Jef Vanden Branden Finally we would like to thank the personnel at Indiana University for their

help in assembling this book Deborah Shaw prepared the index We thank her for the skill and speed with which she was able to work     Low Level X Window Programming Ross J. Maloney,2018-03-31 This is the missing X Window book While others have shown what the X Window system has available this book shows how to convert this potential into working tools to fulfil your visualisation needs It is of the show me class of books The majority of the book covers Xlib although a short coverage of Xcb is also given Included are The relationship between Xlib and the X Window protocol All the basic Xlib topics are covered Complete working programs with their results Exercises to reinforce the material just covered A 9 part partition to building a complete X program is used throughout This partitioning fosters the inclusion of all code necessary All programs are written in C and are one to four pages in length Open source programs with the occasional Postscript script are shown to provide support as needed Throughout the examples consideration is given to using colour The examples produce simple results with the aim of providing building blocks for application oriented codes The book is directed at graduate students and researchers who create computer code to visualise their data     *Revue Canadienne Des Sciences de L'information* ,1992
