Introduction to the Theory of Nonlinear Optimization Johannes Jahn, 2020-07-02 This book serves as an introductory text to optimization theory in normed spaces and covers all areas of nonlinear optimization It presents fundamentals with particular emphasis on the application to problems in the calculus of variations approximation and optimal control theory The reader is expected to have a basic knowledge of linear functional analysis

Optimal Structural Design under Stability Constraints Antoni Gajewski, Michal Zyczkowski, 2012-12-06 The first optimal design problem for an elastic column subject to buckling was formulated by Lagrange over 200 years ago However rapid development of structural optimization under stability constraints occurred only in the last twenty years In numerous optimal structural design problems the stability phenomenon becomes one of the most important factors particularly for slender and thin walled elements of aerospace structures ships precision machines tall buildings etc In engineering practice stability constraints appear more often than it might be expected even when designing a simple beam of constant width and variable depth the width if regarded as a design variable is finally determined by a stability constraint lateral stability Mathematically optimal structural design under stability constraints usually leads to optimization with respect to eigenvalues but some cases fall even beyond this type of problems A total of over 70 books has been devoted to structural optimization as yet but none of them has treated stability constraints in a sufficiently broad and comprehensive manner The purpose of the present book is to fill this gap The contents include a discussion of the basic structural stability and structural optimization problems and the pertinent solution methods followed by a systematic review of solutions obtained for columns arches bar systems plates shells and thin walled bars A unified approach based on Pontryagin's maximum principle is employed inasmuch as possible at least to problems of columns arches and plates Parametric optimization is discussed as well
