Provided by publisher **Management of Technology and Innovation in Japan** Cornelius Herstatt, Christoph Stockstrom, Hugo Tschirky, Akio Nagahira, 2006-02-23 What Makes this Book Unique No crystal ball is required to safely predict that in the future even more than in the past mastered innovativeness will be a primary criterion distinguishing successful from unsuccessful companies At the latest since Michael Porter's study on the competitiveness of nations the same criterion holds even for the evaluation of entire countries and national economies Despite the innumerable number of publications and recommendations on innovation competitive innovativeness is still a rare competency The latest publication of UNICE the European Industry organization representing 20 million large midsize and small companies speaks a clear language Europe qualifies to roughly 60% 70% of the innovation strength of the US Japan The record unemployment in many EU countries does not contradict this message A main reason may be given by the fact that becoming an innovative organization means increased openness towards the new and more tolerance towards risks and failures both challenging the inherently difficult management art of cultural change Further lacking innovativeness is often related to legal and fiscal barriers which rather hinder than foster innovative activities Yet another reason to explain Europe's notorious innovation gap refers to insufficient financial R D resources on the company as well as on the national level As a result for example high ranking decisions on the level of the European Commission are taken to increase R D expenditures in the European Union from roughly 2% to 3% of GNP
