Mother Nature A History Of Mothers Infants And Natural Selection:

Mother Nature Sarah Blaffer Hrdy, 1999 We are tempted to think of maternal instinct as a quality a woman has or lacks But the belief that mothers instinctively nurture their offspring one of the West's most cherished ideals and a view widely accepted even in scientific circles has become increasingly controversial Mother Nature presents a radical new way of understanding how mothers act and why and how this new understanding is changing the way scientists think about how evolution works Drawing on anthropology history literature developmental psychology and animal behavior Sarah Hrdy examines the distinct biological and genetic elements that constitute maternal instinct She strips away the biases implicit in conventional stereotypes of female nature to give us very different and provocative perspectives on maternal ambivalence the links between maturity and ambition mother love and sexual love and why age old tensions between the sexes persist and are being played out today in efforts to control women's reproductive choices Combining decades of research with her own experience as a mother Hrdy makes clear in this remarkable book what it means from a historical and evolutionary perspective to be a mother and explains how this knowledge has transformed our understanding of human development and behavior

Gander, 2004-12-01 There is no question more fundamental to human existence than that posed by the nature versus nurture debate For much of the past century it was widely believed that there was no essential human nature and that people could be educated or socialized to thrive in almost any imaginable culture Today that orthodoxy is being directly and forcefully challenged by a new science of the mind evolutionary psychology Like the theory of evolution itself the implications of evolutionary psychology are provocative and unsettling Rather than viewing the human mind as a mysterious black box or a blank slate evolutionary psychologists see it as a physical organ that has evolved to process certain types of information in certain ways that enables us to thrive only in certain types of cultures In

On Our Minds Eric M Gander examines all sides of the public debate between evolutionary psychologists and their critics Paying particularly close attention to the popular science writings of Steven Pinker Edward O Wilson Richard Dawkins and Stephen Jay Gould Gander traces the history of the controversy succinctly summarizes the claims and theories of the evolutionary psychologists dissects the various arguments deployed by each side and considers in detail the far reaching ramifications social cultural and political of this debate Gander s lucid and highly readable account concludes that evolutionary psychology now holds the potential to answer our oldest and most profound moral and philosophical questions fundamentally changing our self perception as a species **Trusting and its Tribulations** Vigdis Broch-Due, Margit Ystanes, 2016-04-01

Despite its immense significance and ubiquity in our everyday lives the complex workings of trust are poorly understood and theorized This volume explores trust and mistrust amidst locally situated scenes of sociality and intimacy Because intimacy has often been taken for granted as the foundation of trust relations the ethnographies presented here challenge us to think about dangerous intimacies marked by mistrust as well as forms of trust that cohere through non intimate forms of sociality **The Oxford Handbook of Women and Competition** Maryanne Fisher, 2017 The Oxford Handbook of Women and Competition is one of the first scholarly volumes to focus specifically on competition and the competitive forces between women Chapters provide readers with a definitive view of the current state of research and collectively address the adaptive and socio cultural foundations of women s competitive behavior motivations and cognitions

Why We Disagree about Human Nature Elizabeth Hannon, Tim Lewens, 2018 Is human nature something that the natural and social sciences aim to describe or is it a pernicious fiction What role if any does human nature play in directing and informing scientific work Leading figures from the life sciences philosophy psychology and anthropology present new essays exploring these questions *Studying Societies and Cultures* Lawrence A. Kuznar, Stephen K. Sanderson, 2015-12-03

Angela Carpenter, 2019-04-18 This volume offers an interdisciplinary study of Reformed sanctification and human development providing the foundation for a constructive account of Christian moral formation that is attentive both to divine grace and to the significance of natural embodied processes Angela Carpenter s argument also addresses the impressions that such theologies give namely either solitude in the face of adversity or sheer passivity Through careful examination of the

doctrine of sanctification in three Reformed theologians John Calvin John Owen and Horace Bushnell Carpenter argues that human responsiveness in the context of fellowship with the triune God provides a basic framework for a theological account of moral transformation Her relational approach brings together divine and human agency in a dynamic process where both are indispensable Supplying an account of moral formation located within Christian salvation while also being attentive to embodied human nature and the sciences this book is vital to all those interested in spiritual formation and the human capacity for love Attachment and Bonding C. Sue Carter,Lieselotte Ahnert,K. E. Grossmann,Sarah B. Hrdy,Michael E. Lamb,2015-10-06 Scientists from different disciplines including anthropology psychology psychiatry pediatrics neurobiology endocrinology and molecular biology explore the concepts of attachment and bonding from varying scientific perspectives Attachment and bonding are evolved processes the mechanisms that permit the development of selective social bonds are assumed to be very ancient based on neural circuitry rooted deep in mammalian evolution but the nature and timing of these processes and their ultimate and proximate causes are only beginning to be understood In this Dahlem Workshop Report scientists from different disciplines including anthropology psychology psychiatry and behavioral biology come together to explore the concepts of attachment and bonding from diverse perspectives In their studies they seek to understand the causes or the consequences of attachment and bonding in general and their different qualities in individual development in particular They address such questions as biobehavioral processes in attachment and bonding early social attachment and its influences on later patterns of behavior bonding later in life and adaptive and maladaptive or pathological outcomes The studies confirm that social bonds have consequences for virtually all aspects of behavior and may be protective in the face of both physical and emotional challenges What's Love Got to Do with it: The Evolution of Monogamy Alexander G. Ophir,Nancy G. Solomon,2020-06-25 **Handbook of Parenting** Marc H. Bornstein,2013-02-01 Please see Volume I for a full description and table of contents for all four volumes Observing Primate Caregivers Maria Botero,2025-02-17 This book aims to advance our understanding of the caregiver infant interaction in primates and its effect on the development of social cognition working from an interdisciplinary approach i e psychology philosophy and anthropology challenging the dominant cognitivist perspectives and methodologies This book is important because it contributes to understanding how primate parent and infant interaction works and how it affects the infant s development Understanding this parent and infant interaction contributes to finding better ways to support human parents and provide better care for non human primate mothers and infants in captivity Adoption Beyond Borders Rebecca J. Compton,2016-02-01 International adoptions have decreased dramatically in the last decade despite robust evidence of the tremendous benefits that early placement in adoptive families can confer upon children who are not able to remain with birth families Adoption Beyond Borders integrates evidence from a range of disciplines in the social and biological sciences including psychology neuroscience evolutionary biology sociology anthropology and social work to provide a ringing endorsement of international adoption as a

viable child welfare option The author interweaves narrative accounts of her own adoption journey which involved visiting a Kazakhstani orphanage daily for nearly a year to illustrate the complexities and implications of the research evidence Topics include the effects of institutionalization on children s developing brains cognitive abilities and socio emotional functioning the challenges of navigating issues of identity when adopting across national cultural and racial lines the strong emotional bonds that form even without genetic relatedness and the methods in which adoptive families can address the special needs of children who experienced early neglect and deprivation thereby providing a supportive environment in which those children can flourish Striving to attain a balanced evidence based perspective on controversial issues Adoption Beyond Borders argues that international adoption must be maintained and supported as a vital means of promoting international child welfare
