## **Principles Of Property Investment And Pricing:**

**Principles of Property Investment and Pricing** Will Fraser, 1993-11-11 This book is a comprehensive analysis of property investment and the market's determination of commercial property values and investment performance. The author examines the economic forces that operate in the property market by placing property in the context of the overall investment market and the local national and international economies. Relevant concepts and principles of economics, investment and finance are identified; these are then used to explain the operation of the property market and property price determination. The text begins with a study of the stock market, identifying the principles and forces which explain the price determination of stocks and shares. These principles are then applied to commercial property investments and a simple theory is developed. The three major sectors of the property market: letting, development and investment are then analysed in depth and the pricing theory is reviewed. After an examination of the influence of government intervention, the subject is synthesised by detailed studies of three of the most turbulent periods in the history of the post Second World War property market in the UK. In this second edition, both the text and illustrative examples have been updated. The theory of the market's determination of rental values and yields have been substantially revised and developed. A new chapter discussing the 1980s property boom and the 1990s collapse has been added.

**Office Markets and Public Policy** Colin Jones, 2013-03-04 This is the first book that looks at how offices and office markets in cities have changed over the last 30 years. It analyses the long term trends and processes within office markets and the interaction with the spatial economy and the planning of cities. It draws on examples around the world and looking forward at the future consequences of information communication technologies and the sustainability agenda, it sets out the challenges that now face investors. The traditional business centres of cities are losing their dominance to the brash new centres of the 1980s and 1990s as the concept of the central business district becomes more diffuse. Edge cities, business space and office parks have entered the vocabulary as offices have also decentralised. The nature and pace of changes to office markets set within evolving spatial structures of cities has had implications for tenants and led to a demand for shorter leases. The consequence is a rethink of the traditional perception of property investment as a secure long term investment and this is reflected in reduced investment holding periods by financial institutions. Office Markets, land management, property and real estate, urban planning and urban studies. It will also be of interest to researchers, property professionals, policy makers and planning practitioners.
