This book is meant to serve as a bridge between the study of the processes and their applications in production industries. Compared with the classical method of writing a book, two similar fundamental processes, namely theory and practice, are blended and explained so that the reader gets a holistic approach to casting. First, basic processes are discussed, followed by the special processes, and design of systems is discussed. It is a comprehensive source of technical metal casting information that foundry engineers and managers, process engineers, and anyone who has interest in or needs to know about foundry operations and products. The book comes as a useful resource for Mechanical Engineering students. It also includes industry data, foundry practices, real time industrial applications, and problems.
