Regulation Of Cellular Signal Transduction Pathways By Desensitization And Amplification:

Regulation of Cellular Signal Transduction Pathways by Desensitization and Amplification David R. Sibley, Miles D. Houslay, 1994-03-29 Molecular Pharmacology of Cell Regulation Series Editor Miles D Houslay This important series provides topical in depth and authoritative reviews on all aspects of the molecular mechanisms of cell regulatory processes It attempts to unravel the molecular structures properties and functions of systems which provide putative targets for the next generation of drugs It will therefore be of major interest to biochemists pharmacologists molecular pathologists endocrinologists cell biologists and research clinicians working on the fundamental description of how cells regulate their own and each other's activity on the development of novel therapeutic agents and on analyses of pathological changes and genetic lesions Volume 3 Regulation of Cellular Signal Transduction Pathways by Desensitization and Amplification Edited by David R Sibley National Institutes of Health Bethesda Maryland USA and Miles D Houslay Institute of Biochemistry University of Glasgow UK Amplification and desensitization are well recognized phenomena in signal transduction systems and descriptions of such phenomena are essential in order to gain insight into the coordinated functioning of cells in normal pathological and transformed states Written by international experts this book will appeal to biochemists pharmacologists and other experimental biologists interested in cellular signalling systems *The Dopamine Receptors* Kim Neve, Rachael L. Neve, 2013-03-09 Seven years after the cloning of the rat dopamine D receptor and four 2 years after the cloning of the last mammalian dopamine receptor identified to date this seems to be an excellent time to put together the present The Dopamine Receptors volume of this series The Receptors There has been time for considerable characterization of the novel receptor subtypes and new exciting lines of research from the molecular to the behavioral levels are taking shape We asked the contributors to The Dopamine Receptors to follow the superb example set by the previous volumes in this series by writing comprehensive historical reviews that will comprise an essential resource for specialists and newcomers to the dopamine receptor field while at the same time providing up to date summaries of the most active areas of research It is difficult these days to write about receptors without addressing the issue of receptor nomenclature For dopamine receptors valid arguments can be made for a system in which the subtypes are classified as belonging to the D1 or D2 classes with letters assigned in the order of cloning D A D D A 1 18 2 D Dc We decided however that common usage counts for something and 28 2 chose to use D D and D for the D2 like receptors because these names are 2 3 4 nearly unanimously used in the literature **Signal Transduction Mechanisms** J.A. Barnes, H.G. Coore, Abdul H. Mohammed, Rajendra K. Sharma, 2013-03-09 This volume contains the proceedings of an International Symposium on Second Messenger Systems Molecular Cellular and Behavioural Aspects which was held at Tobago on June 16 17 1994 The interaction of an extracellular agonist First Messenger with its plasma membrane receptor leads to the transmission of a signal across the cell membrane and results in the production and or activation of other signalling molecules Second Messengers These Second Messengers

control the action of many protein kinases and protein phosphatases and so lead to cellular responses Although the biochemical basis of the transduction of signals in the main signalling systems in eukaryotic cells is probably largely known intensified research is ongoing in the following areas the discovery of specific substrates for many protein kinases elucidation of the biological significance of the differential tissue expression and heterogeneity of many signalling proteins and the unravelling of diverse interactions such as signal potentiation synergism antagonism and neuronal co transmission between signalling systems As knowledge from such studies accumulates it is becoming clear that the cross talk interactions between signalling systems are important features of dynamic cell regulation This volume is designed to summarize some aspects of the current work on various Second Messenger Systems and the integration of signals with respect to plasma membrane receptors Second Messenger generation and degradation protein kinase and phosphatase cell cycle control and cellular learning and memory

New Developments in Lipid-Protein Interactions and Receptor Function K.W.A. Wirtz, Lester Packer, J.Å. Gustafsson, A.E. Evangelopoulos, J.P. Changeux, 2012-12-06 A NATO Advanced Study Institute on New Developments in Lipid Protein Interactions and Receptor Function was held on the Island of Spetsai Greece from August 16 27 1992 This Institute was organized to bring together researchers in the field of membrane organization and dynamics with those actively involved in studies on receptor function signal transduction mechanisms and gene regulation 2 Presentations and discussions focussed on the regulation of intracellular Ca levels on the second messengers derived from inositol lipids and on the specific phospholipase C isozymes involved in these processes A major focus was on G proteins and the effect of lipid anchors on their function These principles of regulation were further discussed in the context of receptors for acetylcholine lysophosphatidic acid and low density lipoproteins In addition various aspects of the genomic regulation of cell growth and differentiation by transcription factors

were presented These topics were put into perspective by discussing the most recent developments in lipid protein interactions protein insertion into membranes membrane lipid organization and lipid dynamics as mediated by phospholipid transfer proteins This book presents the content of the major lectures and a selection of the most relevant of the most important topics posters These proceedings offer a comprehensive account presented during the course of the Institute The book is intended to make these proceedings accessible to a large audience

Molecular Biology of G-Protein-Coupled Receptors M. Brann, 2012-12-06 LESLIE L IVERSEN The present series of volumes is well timed as the impact of molecular genetics on pharmacology has been profound and a comprehensive review of the rapid advances of the past decade is much needed Since the pioneering work of Dale Ariens and others in the early years of this

century much of pharmacology has been founded on the concept of receptors To begin with the receptor was conceived of as a black box which recognized and transduced the biological effects of neurotransmitters hormones or other biological messengers and which could also represent a target for man made drugs It is only in the last two decades that molecular pharmacology has blossomed first with the advent of radioligand binding techniques and second messenger studies which greatly facilitated the biochemical study of drug receptor interactions and latterly with increasing knowledge of the molecular architecture of the receptor proteins themselves This started with the traditional biochemical approach of isolating and purifying the receptor molecules This proved to be a task of immense technical difficulty because of the low density of receptors in most biological source tissues although there were some notable successes e g the purification of the nicotinic acetylcholine receptor from the electric organ of Torpedo It was the application of molecular genetics technology during the 1980s however which really accelerated progress in this field Trends in Regulatory Peptides Hubert

Vaudry,Marie-Christine Tonon,David Vaudry,2018-07-24 Regulatory peptides represent the most diverse and versatile family of messenger molecules They are produced by all living organisms from bacteria to mammals They are involved in a wide variety of biological functions Biologically active peptides and their receptors thus constitute an unlimited source of inspiration for the development of innovative drugs and cosmetics The present eBook is a unique collection of research articles and reviews that provide a representative exemplification of the latest progress in regulatory peptide research
