Reindustrialization and Technology Roy Rothwell, Walter Zegveld, 1985 *Reindustrialization and Technology* Roy Rothwell, Walter Zegveld, 1985 **Reindustrialization and technology, Roy Rothwell, Walter Zegveld ,1985**

Management of Technology H. Lowe, 1995-10-31 Explains the purpose of a technology strategy and the need for its integration with other business policies **Reindustrialization Or New Industrialization ,1981 The American Cities and Technology Reader** Gerrylynn K. Roberts, 1999 Designed to be used on its own or as a companion volume to the textbook this book offers in depth readings on the technological dimensions of US cities from the earliest settlements to the internet communications of the 1990s **Technological Change in a Spatial Context** Enrico Ciciotti, Neil Alderman, Alfred Thwaites, 2012-12-06 This book represents a selection of contributions to the Regional Science Association European Summer Institute held at Arco Lake of Garda Italy from 17th to 23rd July 1988 on the theme of Theories and policies of technological development at the local level As such it forms a complementary volume to the collection of invited papers entitled The Spatial Context of Technological Development edited by Professors Riccardo Cappellin and Peter Nijkamp and published by Avebury Gower The Summer Institute covered a broad range of themes and contributions from over 100 researchers It has therefore not been our intention to represent or replicate these themes directly but to provide as wide an international coverage of current research in regional science in the field of technological change as possible The papers to be found in this book are drawn from the European Community Eastern Europe Scandinavia North America and elsewhere Inevitably as the book was to be published in English most of the editorial work has been undertaken at the Centre for Urban and Regional Development Studies at Newcastle University In so doing we have attempted to standardize the English as far as possible whilst trying not to lose the characteristics of the styles of the individual authors Entrepreneurship & Technology Wayne S. Brown, Roy Rothwell, 1986 *Competitiveness Through Technology* Jerry Dermer, 1986

Entrepreneurship, Human Capital, and Regional Development Rui Baptista, João Leitão, 2015-01-14 This book makes original contributions to the literature on clusters human capital and regional development by focusing on the link between entrepreneurship and economic growth aiming for a better understanding of the dynamics of growth determined by the entrepreneur's action in the regional space The focus is therefore on critical reflection and rethinking the articulation between three levels of analysis of economic systems namely entrepreneurship human capital and regional development which have not so far been perfectly articulated in the literature of reference on endogenous growth Although there has been significant research so far into the success and failure of clusters the implications of these multiple research efforts fail to provide political decision makers and company managers with critical information about which mechanisms lie behind cluster success and also about how clusters survive and prosper The innovative approaches presented in this book on entrepreneurship human capital mobility and regional development have considerable potential to create new and original

implications for decision makers and managers In terms of value added this book contributes to the literature by seeking answers to the following questions i Is the growth and success of clusters over time due to concentration and transmission of business competences through spin offs located in a given regional space ii Does increased density of job options outside the workplace contribute to increased mobility of human capital between firms located within clusters and so improve coordination in the local labor market iii Do spin offs benefit from hiring workers from successful incumbents inasmuch as those workers are expected to perform better than other workers from different origins Integrating theoretical frameworks empirical research and regional case studies from Portugal Spain Norway and Turkey the editors and contributors demonstrate that the regional dynamics of industry growth are strongly influenced by the mobility of employees towards new firms

The International Handbook on Innovation Larisa V Shavinina,2003-10-16 The breadth of this work will allow the reader to acquire a comprehensive and panoramic picture of the nature of innovation within a single handbook

Technology and Culture ,1989 **The Dynamics of Technology** G. Barbiroli,2013-03-14 Technology is taking on an increasingly central and determining role in society and can provide contradictory results wealth on the one hand but also unemployment environmental imbalances and other social problems on the other Manufacturing techniques and production organization are chosen in every country based mainly on the specific needs of the companies while the real needs of each population are often quite different Already in order to prevent all forms of technology from becoming increasingly invasive towards both the natural supply of resources and the specific though highly differentiated needs of humanity technological paths must be identified and followed which are capable of making the various needs compatible from the standpoint of sustainable development the conservation and increase in value of natural resources and the quality of development This will become increasingly important in the future This goal is undoubtedly ambitious and difficult to achieve however evidence of the problems caused by generalized uncontrolled use of technology all over the world leads us to believe that intense efforts must be made to achieve this aim If not humankind runs the risk of an irreversible degradation of the most important aspects of economic development and its quality Within this framework those companies that produce goods and services obviously occupy a central active role which they must play with a view both to competitiveness and overall qualification and to contributing to the objectives of sustainable development

The Role of Science and Technology in Competitiveness United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Science, Research, and Technology,1987 *Routledge Library Editions: Economic Geography* Various,2021-06-23 The books in this set originally published between 1968 and 1992 introduce the reader to the many lines of thought in the literature on economic geography and tie these various aspects together within the concept of the economy As well as providing a comprehensive overview of the Western European economy since the Second World War and including specific studies and assessments of the Dutch and Italian economies these volumes examine the economic factors that have shaped

cities and patterns of urbanization Regions in Recession and Resurgence Michael Chisholm, 2015-03-27 The world economy has undergone rapid evolution in recent decades along with changes in the importance of industries and their organization and sharp changes in the fortunes of regions There are differences of opinion regarding the mainsprings of change and development and the role of governments in fostering national output In order to show the relevance of these changes to regional economies the book focuses on the different schools of economic thought from the neo classical through Keynesian to Marxist radical ideas and monetarist supply side thinking providing a brief description of their structure in non spatial terms The way these theories map into contrasting ideas regarding the mechanisms of regional economic growth is then explained The book concentrates on developed economies and explicitly seeks to confront theory with fact fact with theory Bringing together non spatial economic theory regional growth theory and relevant empirical data this book is intended for students in geography and regional economics but will also be of interest for those studying politics and government
