General physics, relativity, astronomy and mathematical physics and methods, 2004 **Relativity Today** C. A. Hoenselaers, Zoltán Perjés, 2002 This book presents recent advances in the theory of general relativity The first part contains a detailed review of the equivalence problem and its solution The key issue here is whether or not two solutions of Einstein's gravitational equations describe identical space times The ideas reviewed are useful for classifying space times in general relativity and for construction of new solutions of the Einstein equations The second part of the volume is devoted to vacuum and perfect fluid space times The third part contains results on gravitational waves and on the asymptotic behavior of the field of bounded sources *Recent Developments In Gravitation - Proceedings Of The "Relativity Meeting - 89"* E. Verdaguer, J. Céspedes, Jaume Garriga, 1990-10-22 This volume reviews some recent developments and new perspectives in classical and Quantum Gravity The topics treated at a graduate level range from some new and old problems in General Relativity algebraic computing gravitational wave astronomy to some more speculative subjects as the early Universe Quantum Gravity and Quantum Cosmology **General Relativity And Relativistic Astrophysics - Proceedings Of The 4th Canadian Conference** Gabor Kunstatler, Jeffrey G Williams, D E Vincent, 1992-02-28 This proceedings contains the talks delivered at plenary and parallel sessions by leading researchers in both classical and quantum general relativity and in astrophysics *Publicationes mathematicae* Kossuth Lajos Tudományegyetem. volume offers a comprehensive overview of our understanding of gravity at both the experimental and the theoretical level. Critical reviews by experts cover topics ranging from astrophysics anisotropies in the cosmic microwave background gamma ray bursts neutron stars and astroparticles cosmology the status of gravitational wave sources and detectors verification of Newton's law at short distances the equivalence principle gravito magnetism measurement theory time machines and the foundations of Einstein's theory to string theory and loop quantum gravity.

Mathematics of Gravitation: Lorentzian geometry and Einstein equations, 1997 Mathematical Reviews, 2005 *Proceedings of the Eleventh Marcel Grossmann Meeting on General Relativity* Hagen Kleinert, Robert T. Jantzen, Remo Ruffini, 2008. The Marcel Grossman Meetings are three yearly forums that meet to discuss recent advances in gravitation general relativity and relativistic field theories emphasizing their mathematical foundations physical predictions and experimental tests. These meetings aim to facilitate the exchange of ideas among scientists to deepen our understanding of space time structures and to review the status of ongoing experiments and observations testing Einstein's theory of gravitation either from ground or space based experiments. Since the first meeting in 1975 in Trieste Italy which was established by Remo Ruffini and Abdus Salam the range of topics presented at these meetings has gradually widened to accommodate issues of major scientific interest and attendance has grown to attract more than 900 participants from over 80 countries. This proceedings volume of the eleventh meeting in the series held in Berlin in 2006 highlights and records the developments and applications of Einstein's theory in diverse areas ranging from fundamental field theories to particle physics astrophysics and cosmology made possible by unprecedented technological developments in experimental and observational techniques from space ground and underground observatories. It provides a broad sampling of the current work in the field especially relativistic astrophysics including many reviews by leading figures in the research community.
