Managing Records as Evidence and Information Richard J. Cox, 2000-12-30 For the past three decades policies regarding a variety of information issues have emanated from federal agencies legislative chambers and corporate boardrooms Despite the focus on information policy it is still a relatively new concept and one only now beginning to be studied The subject area is wider than believed archives and records policies information resources management information technology telecommunications international communications privacy and confidentiality computer regulation and crime intellectual property and information systems and dissemination This is not a compendium of policies to be used but rather an exploration in a more detailed fashion of the fundamental principles supporting the setting of records policies Records policies are critically important for records professionals to develop and use as a means of strategically managing the information and evidence found in the millions of records created daily provided that the policies are based on

comprehensible principles This is a series of discourses on the fundamentals of archives and records management needing to be understood before any organization attempts to define and set any policy affecting records and information The chapters concern defining records how information technology plays into policy compiling the fundamental tasks of identifying and maintaining records as critical to records and information policy public outreach and advocacy as a key objective for such policy and the role of educating records professionals in supporting sensible records policies *SDI : technology, survivability, and software* , *People and Computers XII* Harold Thimbleby, Brid O'Conaill, Peter J. Thomas, 2013-03-14 Most organisations try to protect their systems from unauthorised access usually through passwords Considerable resources are spent designing secure authentication mechanisms but the number of security breaches and problems is still increasing DeAlvare 1990 Gordon 1995 Hitchings 1995 Unauthorised access to systems and resulting theft of information or misuse of the system is usually due to hackers cracking user passwords or obtaining them through social engineering System security unlike other fields of system development has to date been regarded as an entirely technical issue little research has been done on usability or human factors related to use of security mechanisms Hitchings 1995 concludes that this narrow perspective has produced security mechanisms which are much less effective than they are generally thought to be Davis Price 1987 point out that since security is designed implemented used and breached by people human factors should be considered in the design of security mechanism It seems that currently hackers pay more attention to human factors than security designers do The technique of social engineering for instance obtaining passwords by deception and persuasion exploits users lack of security awareness Hitchings 1995 also suggests that organisational factors ought to be considered when assessing security systems The aim of the study described in this paper was to identify usability and organisational factors which affect the use of passwords The following section provides a brief overview of authentication systems along with usability and organisational issues which have been identified to date 1 **Closing an Era** Richard J. Cox, 2000-09-30 The importance of records in modern society is explored by re examining some of the historical antecedents for critical functions in the modern records professions The motivation for writing this book comes from a conviction of the importance of records and records professionals in organizations and society as well as the need to possess a stronger sense of the events trends people debates and controversies producing the modern records professions Archivists and records managers have tended to discount the importance of their historical antecedents ignoring the fact that many of the current debates and issues before the profession are not new but embedded in the historical evolution of the records professions Re examining some of the historical origins helps records professionals to re examine their mission to manage records for the benefit of organizations and of all of society Such re evaluation also helps to remind records professionals and others that the concerns generated by new electronic recordkeeping technologies are not new at all but built deep within the fabric of traditional records creation and administration One Jump Ahead Jonathan Schaeffer, 2008-12-16 It s hard to believe that it s been

over a decade since *One Jump Ahead: Challenging Human Supremacy at Checkers* was published I'm delighted to have the opportunity to update and expand the book. The first edition ended on a sad note and that was reflected in the writing. It is now eleven years later and the project has come to a satisfying conclusion. Since its inception the checkers project has consumed eighteen years of my life, twenty if you count the pre-CHINOOK and post-solving work. It's hard for me to believe that I actually stuck with it for that long. My wife Steph would probably have something witty to say about my obsessive behavior. Rereading the book after a decade was difficult for me. When I originally wrote *One Jump Ahead* I vowed to be candid in my telling of the story. That meant being honest about what went right and what went wrong. I have been criticized for being hard on some of the characters. That may be so, but I hope everyone will agree that the person receiving the most criticism was justifiably me. I tried to be balanced in the storytelling, reflecting things as they really happened and not as some sanitized version of everyone lived happily ever after. **The Cumulative Book Index**, 1986. **AAMI Standards and Recommended Practices**, 1993. *Strategic Defense Initiative* Office of the Technology Assessment, 2014-07-14. Strategic Defense Initiative examines developments in the technologies currently being researched under SDI. The OTA does not repeat the work of its earlier reports but gives special attention to filling in gaps in those reports and to describing technical progress made in the intervening period. The report also presents information on the prospects for functional survival against preemptive attack of alternative ballistic missile defense system architectures now being considered under the SDI. Finally, it analyzes the feasibility of developing reliable software to perform the battle management tasks required by such system architectures. Originally published in 1988.
