## **Shared Care For Diabetes:**

*The Evidence Base for Diabetes Care* William Herman, Ann Louise Kinmonth, Nick Wareham, Rhys Williams, 2009-12-22  
Now in its second edition *The Evidence Base for Diabetes Care* has been fully revised and updated to incorporate new evidence from clinical trials. The aim of the book remains the same to provide treatment recommendations based on the latest research and ensure patients with diabetes receive the best possible care. Designed to be user friendly, the evidence is displayed in clear tables with accompanying critiques including grading of evidence where appropriate. As well as summarizing the current evidence available for diabetes prevention and care, the contributors highlight areas where evidence is lacking and where studies are underway. This book is an invaluable source of evidence based information distilled into guidance for clinical practice.

**EHealth Beyond the Horizon** European Federation for Medical Informatics. International Congress, Stig Kjær Andersen, 2008  
The first part of the MIE 2008 conference theme *eHealth Beyond the Horizon* highlights the expectations for the future of ehealth and raises the question: What sort of developments in ehealth services can we imagine emerging above the horizon in the years to come? *EHealth Beyond the Horizon* contains a good number of high quality papers giving different perspectives of this future, some of them already available today in *picot* scale, some of them outlined in visions. The second part of the theme *Get IT* There has triggered a large number of papers describing how to create, evaluate, adjust and deliver products and deploy services in healthcare organizations for the necessary information technology as a basis for the ehealth applications that are essential in order to respond to the challenges of the health systems. The papers in the proceedings are grouped by themes according to the submission categories and the supplied keywords. As the last theme, three doctoral students from different areas of medical informatics were selected to present and discuss their research under the guidance of a panel of distinguished research faculties.

**Trends in Asthma Research** Miroslav Tersa, 2005  
Asthma is a disease that affects the lungs. It causes repeated episodes of wheezing, breathlessness, chest tightness and night time or early morning coughing. Tens of millions of people throughout the world suffer from asthma. Airways are the paths that carry air to the lungs. As the air moves through the lungs, the airways become smaller like branches of a tree. During an attack, the sides of the airways in the lungs become inflamed and swollen. Muscles around the airways tighten and less air passes in and out of the lungs. Excess mucus forms in the airways, clogging them even more. The attack, also called an episode, can include coughing, chest tightness, wheezing and trouble breathing. Environmental exposures such as house dust mites and environmental tobacco smoke are important triggers of an attack. This new book presents important new research on the causes of asthma as well as its diagnosis and treatment.

The discussions not only address these clinical problems but each is a workshop for incorporating what it means to be a family physician into everyday practice.
