Sharing Geographic Information:

Advances in Cartography and Geographic Information Engineering Jiayao Wang, Fang Wu, 2021-07-30 This book reviews and summarizes the development and achievement in cartography and geographic information engineering in China over the past 60 years after the founding of the People's Republic of China. It comprehensively reflects cartography as a traditional discipline has almost the same long history with the world's first culture and has experienced extraordinary and great changes. The book consists of nineteen thematic chapters. Each chapter is in accordance with the unified directory structure: introduction, development process, major study achievements, problem and prospect, representative works, as well as a lot of references. It is useful as a reference both for scientists and technicians who are engaged in teaching, researching, and engineering of cartography and geographic information engineering.

Mapping the Determinants of Spatial Data

Sharing Uta Wehn de Montalvo, 2024-11-01 This title was first published in 2003. With the increasing use of GIS in industrialised and developing countries, the availability of spatial data has become an issue that affects many public and private sector organisations. They are faced with the high cost and substantial effort involved in the generation of spatial data, and so the sharing of this data is increasingly being seen as a way of overcoming expense and easing availability and access. But this can provide a way of using GIS effectively only if the key players involved in the use and supply of spatial data are willing to share. This book employs a theory from social psychology as an organising framework to systematize the determinants of organisations' spatial data sharing behaviour. It develops a model which explains the likely willingness of key individuals within organisations to engage in spatial data exchanges across organisational boundaries and then tests this on a survey based in South Africa.

Community Participation and Geographical Information Systems William J.

Craig, Trevor M. Harris, Daniel Weiner, 2002-04-04 Have you ever considered how much effect information technology has on society throughout the world? Progress often places lower income and marginalized communities at a distinct disadvantage. Community Participation and Geographic Information Systems, however, offers a detailed look at numerous incidences around the world where communities have achieved success.

Environmental Information Management And Analysis W K Michener, J W Brunt, S G Stafford, 1994-08-08 Most environmental studies are based upon data collected at fine spatial scales: plots, sediments, cores, etc. Furthermore, temporal scales of these studies have been relatively short: days, weeks, months, and few studies have exceeded three years' duration, the typical funding cycle. Despite this history, environmental scientists are now being called

Geographic Information Research Massimo Craglia, H. Couclelis, 2020-10-28 The contributors to this edited collection demonstrate that geographic information research is truly global in character, cutting across a wide range of disciplines and addressing conceptual, methodological, technical, ethical, and political issues alike. Of the six themes, two are broadly concerned with data integration, geographic data infrastructures, GIS diffusion, and implementation; two are more technical and conceptual in nature, generalisation, concepts, and paradigms; and two reflect to a larger extent the application-driven
