Agriculture **Monitoring Bird Populations by Point Counts**, 1995 *Optimizing the Duration of Point Counts for Monitoring Trends in Bird Populations* Jared Verner, 1988 Minute by minute analysis of point counts of birds in mixed conifer forests in the Sierra National Forest central California showed that cumulative counts of species and individuals increased in a curvilinear fashion but did not reach asymptotes after 10 minutes of counting Comparison of the expected number of individuals counted per hour with various combinations of counting time and noncounting times for record keeping and travel between counting stations showed that 10 minute counts were most efficient in most cases Counting longer than 10 minutes is not recommended because other increased risk of double counting some individuals Optimizing the Duration

Monitoring Bird Populations in Small Geographic Areas, 2006

Numerous methods exist for monitoring bird populations and there is a large literature describing them There are few resources however that provide comprehensive advice on every step of organizing and carrying out a survey from the early stages of planning to final use of the data Even fewer resources are designed to meet the needs of a wide variety of potential users from amateurs interested in change of bird life in a local study preserve to professionals testing hypotheses on the response of birds to habitat management although much of the advice should be the same for every monitoring program Whether survey objectives are very modest or rigorously scientific samples must be sufficiently numerous and well distributed to provide meaningful results and the survey should be well designed to ensure that the money and effort going into it are not wasted This document is intended to be a complete resource for anyone planning to organize monitoring of noncolonial landbirds within a relatively small geographic area e g from the size of a woodlot to a large park The first of its two parts provides background explaining the importance of good study design and gives specific advice on all aspects of project planning and execution of high quality data collection for the purpose of hypothesis testing The second part is self contained and nontechnical and describes complete plans for a site specific checklist survey suitable for addressing monitoring questions frequently asked by amateurs and for involvement of volunteers in data collection Throughout are references to additional resources from background literature to sources of existing survey protocols analysis software and tools for archiving data

Conservation Biology of Hawaiian Forest Birds Thane K. Pratt, Carter T. Atkinson, Paul C. Banko, Bethany L. Woodworth, James D. Jacobi, 2009-01-01

Hawaii's forest bird community is the most insular and most endangered in the world and serves as a case study for threatened species globally Ten have disappeared in the past thirty years nine are critically endangered and even common species are currently in decline Thane K Pratt his coeditors and collaborators all leaders in their field describe the research and conservation efforts over the past thirty years to save Hawaii's forest birds They also offer the most comprehensive look at the reasons for these extinctions and attempts to overcome

them in the future Among the topics covered in this book are trends in bird populations environmental and genetic factors limiting population size avian diseases predators and competing alien bird species Color plates by award winning local photographer Jack Jeffrey illustrate all living species discussed or described

Estimating Presence and Abundance of Closed Populations George A. F. Seber, Matthew R. Schofield, 2023-12-01 This comprehensive book covers a wide variety of methods for estimating the sizes and related parameters of closed populations With the effect of climate change and human territory invasion we have seen huge species losses and a major biodiversity decline Populations include plants trees various land and sea animals and some human populations With such a diversity of populations an extensive variety of different methods are described with the collection of different types of data For example we have count data from plot sampling which can also allow for incomplete detection There is a large chapter on occupancy methods where a major interest is determining whether a particular species is present or not Citizen and opportunistic survey data can also be incorporated A related topic is species methods where species richness and species interactions are of interest A variety of distance methods are discussed One can use distances from points and lines as well as nearest neighbor distances The applications are extensive and include marine acoustic and aerial surveys using multiple observers or detection devices Line intercept measurements have a role to play such as for example estimating parameters relating to plant coverage An increasingly important class of removal methods considers successive removals from a population with physical removal or removal by capture recapture of marked individuals With the change in ratio method removals are taken from two or more classes e g males and females Effort data used for removals can also be used A very important method for estimating abundance is the use of capture recapture data collected discretely or continuously and can be analysed using both frequency and Bayesian methods Computational aspects of fitting Bayesian models are described A related topic of growing interest is the use of spatial and camera methods With the plethora of models there has been a corresponding development of various computational methods and packages which are often mentioned throughout Covariate data is being used more frequently which can reduce the number of unknown parameters by using logistic and loglinear models An important computational aspect is that of model selection methods The book provides a useful list of over 1400 references
