Monitoring The Central Nervous System:

Central Nervous System Monitoring in Anesthesia and Intensive Care Jochen Schulte am Esch, Eberhard Kochs, 2012-12-06 Research in electrophysiologic monitoring in anesthesia and intensive care has focussed mostly on questions pertinent for patient care First how to quantitate drug effects on brain electrical activity and the degree of anesthetic induced suppression of the central nervous system Second how to monitor functional impairment following cerebral ischemia and hypoxia And third how to differentiate between drug induced effects on the central nervous system and deleterious events related to reductions in cerebral blood flow and or oxygen delivery Even though progress has been achieved over the last 10 years in this field and fascinating new techniques have been developed it is still not clear which monitor parameter will provide adequate information on the depth of anesthesia and the analgesic level Because the central nervous system has been one of the main research areas in our department over the last 10 years we organized a workshop to summarize the latest developments in central nervous system monitoring This book comprises the topics of this workshop and is intended to provide insight into the current status of central nervous system monitoring elucidating possible indications and delineating its limitations

Monitoring the Central Nervous System PS Sebel, W. Fitch, 1994-12-12 This is the first book to cover in a single volume all aspects of monitoring the functions of the central nervous system during neurosurgery and in the intensive care unit Since anaesthetics exert their principle effects on the central nervous system it is of paramount importance that the functions of this system are adequately monitored There are many books devoted to monitoring in anaesthesia in general However they concentrate on the autonomic functions such as heart rate blood pressure respiration etc and often give very little information on central nervous system monitoring or the specialized needs of the neuroanaesthetist

Monitoring the Nervous System for Anesthesiologists and Other Health Care Professionals Antoun Koht, Tod B. Sloan, J. Richard Toleikis, 2017-06-12 This widely praised first of its kind book has been thoroughly updated expanded and enriched with extensive new case material illustrations and link outs to multimedia practice guidelines and more Written and edited by outstanding world experts this was the first and remains the leading single source volume on intraoperative neurophysiological monitoring IOM It is aimed at graduate students and trainees as well as members of the operative team including anesthesiologists technologists neurophysiologists surgeons and nurses Now commonplace in procedures that place the nervous system at risk such as orthopedics neurosurgery otologic surgery vascular surgery and others effective IOM requires an unusually high degree of coordination among members of the operative team The purpose of the book is to help students trainees and team members acquire a better understanding of one another's roles and thereby to improve the quality of care and patient safety From the reviews of the First Edition A welcome addition to reference works devoted to the expanding field of nervous system monitoring in the intraoperative period will serve as a useful guide for many different health care professionals and particularly for anesthesiologists involved with this monitoring modality An

excellent reference and a helpful guide both to the novice and to the developing expert in this field Canadian Journal of Anesthesia Impressive The book is well written indexed and illustrated The chapters are all extensively referenced It is also very good value at the price I would recommend this book to all residents and especially to all neuroanesthesiologists It will make a worthwhile addition to their library Journal of Neurosurgical Anesthesiology
