Monitoring Wilderness Stream Ecosystems:

Monitoring Wilderness Stream Ecosystems Jeffrey C. Davis, 2001 A protocol and methods for monitoring the major physical chemical and biological components of stream ecosystems are presented The monitoring protocol is organized into four stages At stage 1 information is obtained on a basic set of parameters that describe stream ecosystems Each following stage builds upon stage 1 by increasing the number of parameters and the detail and frequency of the measurements Stage 4 supplements analyses of stream biotic structure with measurements of stream function carbon and nutrient processes Standard methods are presented that were selected or modified through extensive field application for use in remote settings

Monitoring Wilderness Stream Ecosystems Jeffrey C. Davis, 2001 Provides detailed guidance on how to acquire data on wilderness streams It offers instruction on monitoring the entire range of structural functional stream parameters in a staged monitoring system that provides increasing detail rigor at each successive stage This staged system offers maximum flexibility allowing modification for particular situations goals needs The manual is organized in a manner that while ensuring the analysis of key factors allows for modification to address particular objectives Monitoring goals generally fall into two main categories obtaining baseline information or evaluating potential impacts Illustrated Monitoring Wilderness Stream Ecosystems Jeffrey C.
