Library,1977 **The Treasury of Knowledge and Library of Reference** Samuel Maunders,1859 *Reason and Nature* José Luis Bermúdez,Alan Millar,2002 Reason and Nature investigates the normative dimension of reason and rationality and how it can be situated within the natural world Nine philosophers and two psychologists address three main themes The first concerns the status of norms of rationality and in particular how it is possible to show that norms we take to be objectively authoritative are so in fact The second has to do with the precise form taken by the norms of rationality The third concerns the role of norms of rationality in the psychological explanation of belief and action It is widely assumed that we use the normative principles of rationality as regulative principles governing psychological explanation This seems to demand that there is a certain harmony between the norms of rationality and the psychology of reasoning What then should we make of the well documented evidence suggesting that people consistently fail to reason well And how can we extend the model to non language using creatures As this collection testifies current work in the theory of rationality is subject to very diverse influences ranging from experimental and theoretical psychology through philosophy of logic and language to metaethics and the theory of practical reasoning This work is pursued in various philosophical styles and with various orientations Straight down the line analytical and largely a priori enquiry contrasts with empirically constrained theorizing A focus on human rationality contrasts with a focus on rationality in the wider natural world As things stand work in one style often proceeds in isolation from work in others If progress is to be made on rationality theorists will need to range widely Reason and Nature will provide a stimulus to that endeavour Herding Monkeys to Paradise John Knight,2011-05-27 This book is a study of the use of monkeys as a tourist attraction in Japan

Monkey parks are popular visitor attractions that display free ranging troops of Japanese macaques to the paying public. The parks work by manipulating the movements of the monkey troop through the regular provision of food handouts at a fixed site where the monkeys can be easily viewed. This system of management leads to a variety of problems including proliferating monkey numbers, park edge crop raiding and the sedentarization of the troop. In addition to falling visitor numbers, these problems have led to the closure or fencing in of many parks, calling into question the future of the monkey park as an institution.

Controversy: Catastrophism and Evolution Trevor Palmer, 2012-12-06. In *Controversy*, Trevor Palmer fully documents how traditional gradualistic views of biological and geographic evolution are giving way to a catastrophism that credits cataclysmic events such as meteorite impacts for the rapid bursts and abrupt transitions observed in the fossil record. According to the catastrophists, new species do not evolve gradually; they proliferate following sudden mass extinctions. Placing this major change of perspective within the context of a range of ancient debates, Palmer discusses such topics as the history of the solar system, present day extraterrestrial threats to earth, hominid evolution and the fossil record.

Monkey to Man Gowan Dawson, 2024-02-27. The first book to examine the iconic depiction of evolution: the march of progress and its role in shaping our understanding of how humans evolved. We are all familiar with the march of progress: the representation of evolution that depicts a series of apelike creatures becoming progressively taller and more erect, before finally reaching the upright human form. Its emphasis on linear progress has had a decisive impact on public understanding of evolution, yet the image contradicts modern scientific conceptions of evolution as complex and branching. This book is the first to examine the origins and history of this ubiquitous and hugely consequential illustration. In a story spanning more than a century, from Victorian Britain to America in the Space Age, Gowan Dawson traces the interconnected histories of the two most important versions of the image: the frontispiece to Thomas Henry Huxley's *Evidence as to Man's Place in Nature* (1863) and *The Road to Homo Sapiens*, a fold-out illustration in the best-selling book *Early Man* (1965). Dawson explores how the recurring appearances of this image pointed to shifting scientific and public perspectives on human evolution, as well as indicated novel artistic approaches and advancements in technology.
