Schaefer, 2012-12-06 The origin and function of normal monocytes and macrophages have been clearly defined by extensive investigations in human and in animal models The central importance of this cell system for the biological defense mechanisms is well established phagocytosis inactivation and destruction of organic and inorganic materials an important role in the initiation of humoral and cell mediated immunological responses and the secretion of a variety of chemical mediator and effector substances are the most important features of this ontogenetically ancient cell system However the data on this cellular system are rather recent and this may explain why relatively little attention has been paid to the pathology of the monocyte macrophage system MMS until now In addition this monograph should focus attention on the secondary pathological implications of the MMS in disorders not primarily originating from this system Several techniques are available to identify even abnormal individuals of this cell system and therefore can be employed for the study of severely altered or neoplastic monocytic cells      *Environmental Health Perspectives* ,1984      *Diagnosis of Blood and Bone Marrow Disorders* Sa A.
