Monophasic Action Potentials Michael R. Franz, 2000-04-14 MAPs have undergone a fascinating history beginning with injury potentials in 1883 and undergoing a remarkable renaissance over the last 30 years in many areas of electrophysiology research both basic and clinical Since 1986 the contact electrode technique has provided a unique means to test basic research concepts in the intact or in vivo human heart Even so observations in clinical electrophysiology still warrant further exploration in basic science Scientific experts in the field have contributed to this volume their latest data on myocardial repolarization and the many factors that modulate normal and abnormal repolarization to the benefit of electrophysiologists cardiologists clinicians as well as pharmaceutical researchers involved in the development of antiarrhythmic drugs By concentrating on the electrical activity of the in situ heart this timely and informative reference brings to light information that cannot be obtained by any other means *Cardiac Electrophysiology Methods and Models* Paul A. Iaizzo, Michael D. Eggen, Tinen L. Iles, 2024-12-24 Cardiovascular disease is the major cause of mortality and morbidity around the world While significant progress has been made in treating a major sub category of cardiac disease and arrhythmias significant unmet needs remain Every day thousands of patients die due to arrhythmias in the U S alone and atrial fibrillation is the most common arrhythmia that affects millions of Americans at any given time Therefore there is an urgent public need to continue to develop new and better therapies for arrhythmias This book reviews key research methods and protocols in cardiac electrophysiology with a focus on advantages and pitfalls It will discuss new developments as well as traditional treatments and methods Chapters will focus on practical implementation and collaborative cross functional research methods The book will contain contributions from scientists and clinicians from various academic and industrial research institutions The inclusion of industrial experts expands the scope and potential audience of this book and provides important perspective beyond basic science Contributors will include researchers and clinicians from academic institutions such as the University of Minnesota Harvard Washington University Case Western Indiana University and Manchester University *Methods and Models in Cardiac Electrophysiology* will be a must have resource for clinical academic scientists engineers from industry Biotech Pharma and Medical Device undergraduate and graduate students physicians biomedical engineers and high school and college teachers interested in studying cardiac electrophysiology and cardiac function The book may also be of interest to students in the fields of physiology molecular biology cellular biology biomedical engineering mechanical engineering electrical engineering and related areas *Practical Methods in Cardiovascular Research* Stefan Dhein, Friedrich Wilhelm Mohr, Mario Delmar, 2006-02-28 Scientists working or planning to work in the field of cardiovascular research will welcome *Methods in Cardiovascular Research* as the reference book they have been waiting for Not only general aspects of cardiovascular research are well presented but also detailed descriptions of methods protocols and practical examples Written by leading scientists in their field chapters cover classical methods such as the Langendorff heart

or working heart models as well as numerous new techniques and methods Newcomers and experienced researchers alike will benefit from the troubleshooting guide in each chapter the extensive reference lists for advanced reading and the great practical experience of the authors *Methods in Cardiovascular Research* is a must have for anybody with an interest in cardiovascular research *Monophasic Action Potentials* Michael R. Franz, Claus Schmitt, Bernhard Zrenner, 2012-12-06 Over the last two decades monophasic action potential MAP recording has matured into a technique that provides a link between basic and clinical electrophysiology International experts present exciting data on MAP recording techniques the mechanism and interpretation of MAPs and novel aspects of repolarization related arrhythmias **Cardiac Repolarization** Ihor Gussak, Charles Antzelevitch, Stephen C. Hammill, Win K. Shen, Preben Bjerregaard, 2003-03-13 A comprehensive review of all the latest developments in cardiac electrophysiology focusing on both the clinical and experimental aspects of ventricular repolarization including newly discovered clinical repolarization syndromes electrocardiographic phenomena and their correlation with the most recent advances in basic science The authors illuminate the basic electrophysiologic molecular and pharmacologic mechanisms underlying ventricular repolarization relate them to specific disease conditions and examine the future of antiarrhythmic drug development based on both molecular and electrophysiological properties They also fully review the clinical presentation and management of specific cardiac repolarization conditions Functional Imaging and Modeling of the Heart Frank B. Sachse, Gunnar Seemann, 2007-07-10 This book constitutes the refereed proceedings of the 4th International Conference on Functional Imaging and Modeling of the Heart FIMH 2007 held in Salt Lake City UT USA in June 2007 The contributions describe both experimental and computational studies and cover topics such as imaging and image analysis cardiac electrophysiology electro and magnetocardiography cardiac mechanics and clinical application imaging and anatomical modeling *Pathophysiology of Cardiovascular Disease* Naranjan S. Dhalla, Heinz Rupp, Aubie Angel, Grant N. Pierce, 2012-12-06 Pathophysiology of Cardiovascular Disease has been divided into four sections that focus on heart dysfunction and its associated characteristics hypertrophy cardiomyopathy and failure vascular dysfunction and disease ischemic heart disease and novel therapeutic interventions This volume is a compendium of different approaches to understanding cardiovascular disease and identifying the proteins pathways and processes that impact it **Cardiac Electrophysiology: from Cell to Bedside** Douglas P. Cardio-Physiology Challenging Empirical Philosophy Brigitte Lohff,Jochen

Schaefer,2022-08-10 With this volume of three essays the authors want to create an opportunity for dialogue between different disciplines by taking a closer look at three cardio physiological examples In the essays presented we will look at the exploration of different cardiological topics from the 20th century all of which have contributed to a better understanding of certain aspects of cardiac activity Not only do these insights provide a more complete picture of these cardiac phenomena but it is also within this context that we can look for and into the patterns of regularities which govern this living organism Our goal is to stimulate a dialogue on the philosophy of science in the spirit of Hans Reichenbach

Progress in Industrial Mathematics at ECMI 2008 Alistair D.

Fitt,John Norbury,Hilary Ockendon,Eddie Wilson,2010-07-23 The 15th European Conference on Mathematics for Industry

was held in the agreeable surroundings of University College London just 5 minutes walk from the British Museum in the heart of London over the very warm sunny days from 30 June to 4 July 2008. Participants from all over the world met with the common aim of reinforcing the role of mathematics as an overarching resource for industry and business. The conference attracted over 300 participants from 30 countries, most of them participating with either a contributed talk, a minisymposium presentation or a plenary lecture. Mathematics in Industry was interpreted in its widest sense as can be seen from the range of applications and techniques described in this volume. We mention just two examples. The Alan Taylor Lecture was given by Mario Primicerio on a problem arising from moving oil through pipelines when temperature variations affect the shearing properties of wax and thus modify the flow. The Wacker Prize winner, Master's student Lauri Harhanen from the Helsinki University of Technology, showed how a novel piece of mathematics allowed new software to capture real-time images of teeth from the data supplied by present-day dental machinery (see ECMI Newsletter 44). The meeting was attended by leading figures from government, business and science who all shared the same aim to promote the application of innovative mathematics to industry and identify industrial sectors that offer the most exciting opportunities for mathematicians to provide new insight and new ideas.
