Monopolistic Competition Revolution In Retrospect:

The Monopolistic Competition Revolution in Retrospect Steven Brakman, Ben J. Heijdra, 2001-01-05 In 1977 a seminal paper was published by Avinash Dixit and Joseph Stiglitz that revolutionized the modeling of imperfectly competitive markets. It launched what might be called the second monopolistic competition revolution which has been far more successful than the first one initiated by Edward Chamberlin and Joan Robinson in the 1930s. In this 2003 collection of essays experts in the fields of macroeconomics, international trade theory, economic geography and international growth theory address the question of why the second revolution was so successful. They also highlight what is missing and look forward to the next step in the modeling of imperfectly competitive markets. The text includes a comprehensive survey of both monopolistic competition revolutions and previously unpublished working papers by Dixit and Stiglitz that led to their famous 1977 paper. With contributions from Dixit, Ethier, Neary and Stiglitz amongst others, this collection will excite interest amongst researchers, advanced students and economists.

Economic globalisation and technological change are the two issues that concerned people in the past concern them today and will concern them in the future all over the world poor or rich Traditionally questions about allocative effects are asked What are the labour market implications Who loses Who wins What is the net aggregate welfare effect after an adjustment period However two points are rarely taken into consideration How do globalisation and technological change interact and what are the potential long run implications for economic growth This book addresses the interplay of these megatrends It asks how economic globalisation may affect innovation and technology of individual firms and eventually the growth prospects of countries Thereby it shows that protectionism not only harms static efficiency but might as well lead to dynamic losses The book provides a systematic overview of the theoretical underpinnings of the openness growth nexus and summarises the conceptual problems and important findings of the empirical analyses so far The theoretical insights are supported by two empirical studies the first dealing with the innovative behaviour and the within multinational technology transfer of Spanish firms that were acquired by foreign companies and the second analysing productivity growth rate implications from exporting for German manufacturing firms

Coleman,2010-01-01 In this tightly argued work William Coleman explores the macroeconomic implications of politically based restraints on competition in labour markets Through a suite of compact models the author investigates the consequences of the labour force securing the best terms of sale for its labour by means of the electoral mechanism He concludes that such electorally optimal labour regulation can explain not only wage rigidity and unemployment but also wage volatility episodes of excess demand for labour the co existence of an inefficient state sector with an efficient private sector and the preference for a minimum wage over a universal wage regulation Finally the approach can rationalise nominal wage rigidity and not solely real wage rigidity In sum the analysis promises to both complete the Classical explanation of unemployment by predicting when why and how real wages will be rigid and at the same time to better secure Keynesian insights by suggesting how money rigidity may be characteristic of electorally optimal labour regulation **Developing**

international trade how the introduction of communications networks and the utilization of time zone differences can affect both the structure of international trade and world welfare Other technological aspects of recent international trade e g competition between international standards the impact of switching costs on imported products introduction are also examined Although a focus on theoretical trade models the book will appeal to scholars policy makers and business units who wish to learn from the recent changes in communications networks and its impact on the global economy It provides information and suggestions for better policy formulation in the fast changing world economy
