Quaternary Period in the United States A.R. Gillespie, S.C. Porter, B.F. Atwater, 2003-12-17 This book reviews advances in understanding of the past ca two million years of Earth history the Quaternary Period in the United States It begins with sections on ice and water as glaciers permafrost oceans rivers lakes and aquifers Six chapters are devoted to the high latitude Pleistocene ice sheets to mountain glaciations of the western United States and to permafrost studies Other chapters discuss ice age lakes caves sea level fluctuations and riverine landscapes With a chapter on landscape evolution models the book turns to essays on geologic processes Two chapters discuss soils and their responses to climate and wind blown sediments Two more describe volcanoes and earthquakes and the use of Quaternary geology to understand the hazards they pose The next part of the book is on plants and animals Five chapters consider the Quaternary history of vegetation in the United States Other chapters treat forcing functions and vegetation response at different spatial and temporal scales the role of fire as a catalyst of vegetation change during rapid climate shifts and the use of tree rings in inferring age and past hydroclimatic conditions Three chapters address vertebrate paleontology and the extinctions of large mammals at the end of the last glaciation beetle assemblages and the inferences they permit about past conditions and the peopling of North America A final chapter addresses the numerical modeling of Quaternary climates and the role paleoclimatic studies and climatic modeling has in predicting future response of the Earth s climate system to the changes we have wrought

Desert Meteorology Thomas T. Warner, 2009-01-18 Aridity prevails over more than one third of the land area of the Earth and over a significant fraction of the oceans as well Yet to date there has been no comprehensive reference volume or textbook dealing with the weather processes that define the character of desert areas Desert Meteorology fills this gap by treating all aspects of desert weather such as large scale and local scale causes of aridity precipitation characteristics in deserts dust storms floods climate change in deserts precipitation processes desertification land surface physics of deserts numerical modelling of desert atmospheres and the effect of desert weather on humans A summary is provided of the climates and surface properties of the desert areas of the world The book is written with the assumption that the reader has only a basic knowledge of meteorology physics and calculus making it useful to those in a wide range of disciplines It includes review questions and problems for the student This comprehensive volume will satisfy all who need to know more about the weather and climate of arid lands It will appeal especially to advanced students and researchers in environmental science meteorology physical geography hydrology and engineering **The Periglacial Environment** Hugh M. French, 2017-10-27 The Periglacial Environment Fourth Edition is an authoritative overview of the world s cold non glacial environments First published in 1976 and subsequently revised in 1996 and 2007 the text has been the international

standard for nearly 40 years The Fourth Edition continues to be a personal interpretation of the frost induced conditions geomorphic processes and landforms that characterize periglacial environments Part One discusses the periglacial concept and describes the typical climates and ecosystems that are involved Part Two describes the geocryology permafrost science associated with frozen ground Part Three outlines the weathering and geomorphic processes associated with cold climate conditions Part Four provides insight into the periglacial environments of the Quaternary especially the Late Pleistocene Part Five describes some of the problems associated with human occupancy in regions that experience frozen ground and cold climate conditions Extensively revised and updated Written by an expert with over 50 years of field research Draws upon the author s personal experience from Northern Canada Alaska Siberia Tibet Antarctica Svalbard Scandinavia southern South America Western Europe and eastern North America This book is an invaluable reference for advanced undergraduates in geography geology earth sciences and environmental sciences programs and to resource managers and geotechnical engineers interested in cold regions

The Prince Edward Islands Steven Chown, Pierre William Froneman, 2008-06-01 This book provides a modern synthetic overview of what is known about the structure functioning and interactions of marine and terrestrial systems at the Prince Edward Islands Building on more than 50 years of biological geological meteorological and oceanographic research it demonstrates not only how inextricably linked marine and terrestrial systems at the islands are but also how global environmental challenges such as climate change biological invasions and over exploitation are playing out at the regional and local levels in the Southern Ocean

Arctic Stream Processes Kevin M. Scott, 1979 Selectively summarizes investigations to 1978 dealing with the physical processes of streams in the arctic Includes Canadian material

Biodiversity and Ecophysiology of Yeasts Carlos Augusto Rosa, Gabor Peter, 2006-03-30 In the last few decades more and more yeast habitats that were not investigated earlier spanning cold climates to tropical regions and dry deserts to rainforests have been explored As a result a large body of ecological data has been accumulated and the number of known yeast species has increased rapidly This book provides an overview of the biodiversity of yeasts in different habitats The recent advances achieved by the application of molecular biological methods in the field of yeast taxonomy and ecology are also incorporated in the book Wherever possible the interaction between yeasts and the surrounding environment is discussed

Vegetation and Production Ecology of an Alaskan Arctic Tundra Larry L. Tieszen, 2012-12-06 This volume on botanical research in tundra represents the culmination of four years of intensive and integrated field research centered at Barrow Alaska The volume summarizes the most significant results and interpretations of the primary producer projects conducted in the U S IBP Tundra Biome Program 1970 1974 Original data reports are available from the authors and can serve as detailed references for interested tundra researchers Also the results of most projects have been published in numerous papers in various journals The introduction provides a brief overview of other ecosystem components The main body presents the results in three general sections The summary chapter is an attempt to integrate ideas and information

from the previous papers as well as extant literature In addition this chapter focuses attention on processes of primary production which should receive increased emphasis Although this book will not answer all immediate questions it hopefully will enhance future understanding of the tundra particularly as we have studied it in Northern Alaska
