International Environmental Law, Policy, and Ethics Alexander Gillespie, 2014 This second edition of International Environmental Law Policy and Ethics revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of

animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy

The Handbook of Social Policy James Midgley, Martin B. Tracy, Michelle Livermore, 2000 Comprises 33 papers grouped under five themes The Nature of social policy The History of social policy Social policy and the social services The Political economy of social policy and International and future perspectives on social policy

The Earthscan Reader in Sustainable Development John Kirkby, Phil O'Keefe, Lloyd Timberlake, 2023-01-23 Such a huge number of books journals and papers have been devoted to defining assessing and implementing sustainable development that students and other readers face information overload Earthscan alone has published hundreds of essays and books on the subject Now though the most authoritative writings have been carefully assessed and collected together in the Earthscan Reader in Sustainable Development The contributions included span five years of the debate and cover all the principle themes the history of the concept the problems in defining it the issues surrounding it and national international policies and schemes to implement it For ease of use the essays have been split into key subject areas such as agriculture population and the commons and they include practical case studies and examples together with analyses from a number of different viewpoints from both the North and South These seminal essays will provide readers with a unique overview of the subject as well as the long awaited basic course material for students of environmental studies economics geography politics planning and the social sciences

Organic Agriculture Sustainability, Markets and Policies OECD, 2003-06-04 This publication reveals that organic agriculture is disadvantaged by current agricultural support policies and the proliferation of standards and labels has sometimes confused consumers and impeded trade

Sustainability in European Transport Policy Matthew Humphreys, 2010-11-19 This book sets out a critical analysis of the body of law and policy initiatives that constitute the EU's common transport policy The development of the transport policy is charted through amending and founding Treaties as well as non legislative documents The book uses a model of sustainability as the basis for the analysis as the criteria for sustainable development were set out under Article 11 of the Treaty on the Functioning of the European Union However sustainable development when taken in the context of transport is difficult to reconcile with unbridled economic growth and unchecked freedom of movement and the book identifies a contradiction at the heart of European policy which can only become more accentuated as environmental trends become more explicit The book argues that European regulation will eventually be forced to recognize this dichotomy and take more forceful action to protect environmental and social development even at the cost of economic progress

Routledge Library Editions: Sustainability Various Authors, 2021-03-04 The 4 volumes in this set originally published between 1988 and 1997 draw together research by leading academics in the area of sustainability and provides a rigorous examination of related key issues The volumes examine environmental policy and plans for a sustainable future This set will be of particular interest to

students of Environmental Studies **The Earthscan Reader in Sustainable Cities** David Satterthwaite, 2021-12-24 The last five years have brought an enormous growth in the literature on how urban development can meet human needs and ensure ecological sustainability This collection brings together the most outstanding contributions from leading experts on the issues surrounding sustainable cities and urban development The Earthscan Reader in Sustainable Cities is fully international in scope and coverage It will be the basic introduction to the subject for a wide range of students in urban geography planning and environmental studies and is essential reading for professionals involved with the successful running and development of cities Environmental Policy in an International Context Pieter Glasbergen, Andrew Blowers, 1995-10-19 The three volumes of Environmental Policy in an International Context have been developed by the Dutch and UK Open Universities as part of the International Environmental Series They accompany a workbook and six videos The first volume takes a critical and analytical look at contemporary environmental issues built around the key questions what are international and environmental problems and why have they become important politically These questions are examined from a variety of viewpoints science sociology politics law and economics A multi disciplinary approach is emphasised and it shows how both technical and scientific solutions need to be sought alongside **Food Policy** Tim Lang, David Barling, Martin Caraher, 2009-03-19 For over half a century food policy has mapped a path for progress based upon a belief that the right mix of investment scientific input and human skills could unleash a surge in productive capacity which would resolve humanity's food related health and welfare problems It assumed that more food would yield greater health and happiness by driving down prices increasing availability and feeding more mouths In the 21st century this policy mix is quietly becoming unstuck In a world marred by obesity alongside malnutrition climate change alongside fuel and energy crises water stress alongside more mouths to feed and social inequalities alongside unprecedented accumulation of wealth the old rubric of food policy needs re evaluation This book explores the enormity of what the new policy mix must address taking the approach that food policy must be inextricably linked with public health environmental damage and social inequalities to be effective Written by three authors with differing backgrounds one in political science another in environmental health and health promotion and the third in social psychology this book reflects the myriad of perspectives essential to a comprehensive view of modern food policy It attempts to make sense of what is meant by food policy explores whether the term has any currency in current policy discourse assesses whether current policies help or hinder what happens judges whether consensus can triumph in the face of competing bids for understanding looks at all levels of governance across the range of actors in the food system from companies and the state to civil society and science considers what direction food policies are taking not just in the UK but internationally assesses who and what gains or loses in the making of these food policies and identifies a modern framework for judging how good or limited processes of policy making are This book provides a major comprehensive review of current and past food policy thinking and proposing the

need for what the authors call an ecological public health approach to food policy Nothing less will be fit for the 21st century
