## **Policy Uncertainty And Risk Conceptual Developments And Approaches:**

Policy Uncertainty and Risk Tomas Hellström, Merle Jacob, 2011-06-28 *Policy Uncertainty and Risk* presents a contribution to risk analysis and risk management in public policy and management at large. Special emphasis is put on the utilization of scientific knowledge by decision makers in instances where knowledge in both spheres of science and administration is highly uncertain and contested. The book therefore contributes a model of science practitioner interaction in a policy area of strong current relevance. The perspective is a realist constructivist one which means that risk and policy are taken to be socially predicated insofar as we can choose and change the way we define and interact with its practices. It is realist insofar as we continually use such constructions to re define and re structure the world we live in. Although essentially theory driven and conceptually oriented, the authors develop their argument for a new interpretation of policy relevant science through a number of pressing case studies. These studies include the recent BSE/CJD crises in the UK, the introduction of Marine Protected Areas in Sweden and the current practices surrounding risk management in corporate bodies. Drawing on empirical cases and theoretical explication, the book provides a number of suggestions as to how risk analysis and risk management may be more properly conceived of both from a practitioner as well as from an academic point of view.

**Human Safety and Risk Management** A. Ian Glendon, Sharon Clarke, Eugene McKenna, 2016-04-19 Reflecting a decade's worth of changes, *Human Safety and Risk Management* Second Edition contains new chapters addressing safety culture and models of risk as well as an extensive re working of the material from the earlier edition. Examining a wide range of approaches to risk, the authors define safety culture and review theoretical models that elucidate mechanisms linking safety culture with safety performance. Filled with practical examples and case studies and drawing on a range of disciplines

the book explores individual differences and the many ways in which human beings are alike within a risk and safety context. It delineates a risk management approach that includes a range of techniques such as risk assessment, safety audit and safety interventions. The authors address concepts central to workplace safety such as attitudes and their link with behavior. They discuss managing behavior in work environments including key functions and benefits of groups, factors influencing team effectiveness and barriers to effectiveness such as groupthink.

Knowledge in Risk Assessment and Management Terje Aven, Enrico Zio, 2018-02-20

Exciting new developments in risk assessment and management. Risk assessment and management is fundamentally founded on the knowledge available on the system or process under consideration. While this may be self-evident to the laymen, thought leaders within the risk community have come to recognize and emphasize the need to explicitly incorporate knowledge K in a systematic, rigorous and transparent framework for describing and modeling risk. Featuring contributions by an international team of researchers and respected practitioners in the field, this book explores the latest developments in the ongoing effort to use risk assessment as a means for characterizing knowledge and/or lack of knowledge about a system or process of interest. By offering a fresh perspective on risk assessment and management, the book represents a significant contribution to the development of a sturdier foundation for the practice of risk assessment and for risk-informed decision making. How should K be described and evaluated in risk assessment? How can it be reflected and taken into account in formulating risk management strategies? With the help of numerous case studies and real-world examples, this book answers these and other critical questions at the heart of modern risk assessment while identifying many practical challenges associated with this explicit framework. This book, written by international scholars and leaders in the field and edited to make coverage both conceptually advanced and highly accessible, offers a systematic, rigorous and transparent perspective and framework on risk assessment and management, explicitly strengthening the links between knowledge and risk. Clearly and concisely introduces the key risk concepts at the foundation of risk assessment and management. Features numerous cases and real-world examples, many of which focused on various engineering applications across an array of industries. *Knowledge of Risk Assessment and Management* is a must-read for risk assessment and management professionals as well as graduate students, researchers and educators in the field. It is also of interest to policy makers and business people who are eager to gain a better understanding of the foundations and boundaries of risk assessment and how its outcomes should be used for decision making.

*National Intelligence and Science* Wilhelm Agrell, Gregory F. Treverton, 2015

Intelligence is currently facing increasingly challenging cross pressures from both a need for accurate and timely assessments of potential or imminent security threats and the unpredictability of many of these emerging threats. The essence of intelligence is no longer the collection, analysis and dissemination of secret information but has become instead the management of uncertainty in areas critical for overriding security goals.

Kinvin Wroth, 2015-08-07 This book assesses the current state of environmental protection under the North American Free Trade Agreement NAFTA Authors from all three member nations Canada Mexico and the United States analyze the agreements impact on such issues as bioengineered crops water policy climate change and indigenous rights **Levees and the National Flood Insurance Program** National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Levees and the National Flood Insurance Program: Improving Policies and Practices, 2013-08-18 The Federal Emergency Management Agency's FEMA Federal Insurance and Mitigation Administration FIMA manages the National Flood Insurance Program NFIP which is a cornerstone in the U S strategy to assist communities to prepare for mitigate against and recover from flood disasters The NFIP was established by Congress with passage of the National Flood Insurance Act in 1968 to help reduce future flood damages through NFIP community floodplain regulation that would control development in flood hazard

areas provide insurance for a premium to property owners and reduce federal expenditures for disaster assistance. The flood insurance is available only to owners of insurable property located in communities that participate in the NFIP. Currently the program has 5 555 915 million policies in 21 881 communities<sup>3</sup> across the United States. The NFIP defines the one percent annual chance flood 100 year or base flood floodplain as a Special Flood Hazard Area (SFHA). The SFHA is delineated on FEMA's Flood Insurance Rate Maps (FIRM)s using topographic meteorologic hydrologic and hydraulic information. Property owners with a federally backed mortgage within the SFHAs are required to purchase and retain flood insurance called the mandatory flood insurance purchase requirement (MFIP). Levees and floodwalls hereafter referred to as levees have been part of flood management in the United States since the late 1700s because they are relatively easy to build and a reasonable infrastructure investment. A levee is a man-made structure usually an earthen embankment designed and constructed in accordance with sound engineering practices to contain control or divert the flow of water so as to provide protection from temporary flooding. A levee system is a flood protection system which consists of a levee or levees and associated structures such as closure and drainage devices which are constructed and operated in accordance with sound engineering practices. Recognizing the need for improving the NFIP's treatment of levees, FEMA officials approached the National Research Council's (NRC) Water Science and Technology Board (WSTB) and requested this study. The NRC responded by forming the ad hoc Committee on Levees and the National Flood Insurance Program: Improving Policies and Practices, charged to examine current FEMA treatment of levees within the NFIP and provide advice on how those levee-related policies and activities could be improved. The study addressed four broad areas: risk analysis, flood insurance, risk reduction, and risk communication regarding how levees are considered in the NFIP. Specific issues within these areas include current risk analysis and mapping procedures, behind accredited and non-accredited levees, flood insurance pricing and the mandatory flood insurance purchase requirement, mitigation options to reduce risk for communities with levees, flood risk communication efforts, and the concept of shared responsibility. The principal conclusions and recommendations are highlighted in this report.
