Moss, Lucy Riall, 2018-02-02 This handbook aims to challenge gender blindness in the historical study of high politics power authority and government by bringing together a group of scholars at the forefront of current historical research into the relationship between masculinity and political power Until very recently in historical terms formal political authority in Europe was normally and ideally held by adult males with female power being perceived as a recurrent aberration Yet paradoxically the study of the interactions between masculinity and political culture is still very much in its infancy This volume seeks to remedy this lacuna by considering the different consequences of the masculinity of power over two millennia of European history It examines how masculinity and political culture have interacted from ancient Rome and the early medieval Byzantine empire to twentieth century Germany and Italy It considers a broad variety of case studies from early medieval Iceland and late medieval France to Naples at the time of the French Revolution and Strasbourg after the Franco Prussian War with a particular focus on the development of political masculinities in Great Britain between the sixteenth century and the present day Man Is by Nature a Political Animal Peter K. Hatemi, Rose McDermott, 2011-09-01

In *Man Is by Nature a Political Animal* Peter K Hatemi and Rose McDermott bring together a diverse group of contributors to examine the ways in which evolutionary theory and biological research are increasingly informing analyses of political behavior. Focusing on the theoretical, methodological and empirical frameworks of a variety of biological approaches to political attitudes and preferences, the authors consider a wide range of topics including the comparative basis of political behavior, the utility of formal modeling informed by evolutionary theory, the genetic bases of attitudes and behaviors, psychophysiological methods and research, and the wealth of insight generated by recent research on the human brain. Through this approach, the book reveals the biological bases of many previously unexplained variances within the extant models of political behavior. The diversity of methods discussed and variety of issues examined here will make this book of great interest to students and scholars seeking a comprehensive overview of this emerging approach to the study of politics and behavior.

Posthuman Urbanism Debra Benita Shaw, 2017-10-24 The World Health Organisation estimates that by 2030 six out of every ten people in the world will live in a city. But what does it mean to inhabit the city in the twenty-first century? *Posthuman Urbanism* evaluates the relevance and usefulness of posthuman theory to understanding the urban subject and its conditions of possibility. It argues that contemporary science and technology is radically changing the way that we understand our bodies and that understanding ourselves as posthuman offers new insights into urban inequalities. By analysing the relationship between the biological sciences and cities from the nineteenth century onward, as it is expressed in architecture, popular culture and case studies of contemporary insurgent practices, a case is made for posthuman urbanism as a significant concept for changing the meaning of urban space. It answers the question of how we can change ourselves to change the way we live with others, both human and non-human, in a rapidly urbanising world.

From Oikonomia to Political Economy Germano Maifreda, 2016-04-22 Renaissance Europe witnessed a surge of interest in new scientific ideas and theories. Whilst the study of this Scientific Revolution has dramatically shifted our appreciation of many facets of the early modern world, remarkably little attention has been paid to its influence upon one key area: that of economics. Through an interrogation of the relationship between economic and scientific developments in early modern Western Europe, this book demonstrates how a new economic epistemology appeared that was to have profound consequences both at the time and for subsequent generations. Dr Maifreda argues that the new attention shown by astronomers, physicians, aristocrats, men of letters, travellers and merchants for the functioning of economic life and markets laid the ground for a radically new discourse that envisioned economics as an independent field of scientific knowledge. By researching the historical context surrounding this new field of knowledge, he identifies three key factors that contributed to the cultural construction of economics. Firstly, Italian Humanism and Renaissance, which promoted new subjects, methods and quantitative analysis. Secondly, European overseas expansion, which revealed the existence of economic cultures previously

unknown to Europeans Thirdly factor identified is the fifteenth and sixteenth century crisis of traditional epistemologies which increasingly valued empirical scientific knowledge over long held beliefs Based on a wide range of published and archival sources the book illuminates new economic sensibilities within a range of established and more novel scientific disciplines including astronomy physics ethnography geology and chemistry alchemy By tracing these developments within the wider social and cultural fields of everyday commercial life the study offers a fascinating insight into the relationship between economic knowledge and science during the early modern period

Animal Rhetoric and Natural Science in Eighteenth-Century Liberal Political Writing Andrew Billing, 2023-12-07 Our tendency to read French Enlightenment political writing from a narrow disciplinary perspective has obscured the hybrid character of political philosophy rhetoric and natural science in the period As Mich le Duchet and others have shown French Enlightenment thinkers developed a philosophical anthropology to support new political norms and models This book explores how five important eighteenth century French political authors Rousseau Diderot La Mettrie Quesnay and R tif de La Bretonne also constructed a political zoology in their philosophical and literary writings informed by animal references drawn from Enlightenment natural history science and physiology Drawing on theoretical work by Derrida Latour de Fontenay and others it shows how these five authors signed on to the old rhetorical tradition of animal comparisons in political philosophy which they renewed via the findings and speculations of contemporary science Engaging with recent scholarship on Enlightenment political thought it also explores the links between their political zoologies and their family resemblance as liberal political thinkers
